Concept

ACTIVprimary has been specifically designed to enhance the teaching and learning experience for early years and Primary education level. The uncomplicated child-friendly interface allows access to ACTIVprimary's many tools and features, encouraging greater involvement in lessons by stimulating your students enthusiasm.

The ACTIVprimary Interface

ACTIVprimary is split into two main areas, the Teacher Interface and the Pupil Interface. The Teacher Interface contains tools for teacher use only, so is located towards the top of the board. The tools contained in the Pupil Interface are intended for use by student and teacher alike, so it is located at the bottom of the board.

A Tool Tray provides access to a set of Tool functions or resources. The items displayed depend on what Tool is selected. Initially, the Tray is located across the bottom of the board so that your students can reach it. However, to make the Flipchart area more accessible, you can switch the location of the Tool Tray to the top of the board.

The Flipchart is your main workspace area and consists of as many pages as you wish to create. Here you can annotate, create objects using the ACTIVprimary tools, retrieve content from the Resource Library and third party applications, focus attention on parts of the screen, use a range of virtual tools to enhance learning, link to other files, and so forth. The Flipchart can then be output to a printer, or you can **Export to HTML**.

Design and Present Mode

Design Mode is an editing mode that allows you to prepare your Flipchart. Here you can manipulate and set properties on objects so that they appear or behave in a certain way when you switch to Present Mode. Extra features are available in Design Mode because you can access the contextual menus. The properties are applied in Present Mode so an object will behave as intended.

Desktop Annotation

From the Desktop Toolbox, you can use the ACTIVpen to draw or highlight in different colors and pen widths over the live Desktop or an image of the Desktop. When finished, you can save the annotations for future use by capturing an image of the screen (or part of the screen) using the Camera Tool.

The Recognition Engine converts your handwriting into text in external applications, such as Microsoft Word.

Integration with other applications

ACTIVprimary has simplified the process to create links to your external documents and applications. If you prefer, it will even host the file for you, so you don't even need to step outside the application.

User Profiles

Makes use of user profiling. This allows you to save your personal layouts, resources and settings so you can access them again the next time you log on to the computer. ACTIVprimary makes it easy to share resources with your colleagues by saving your resources to a shared library located on your computer network.

Resources

The Resource Library allows you to access files and objects to use with your Flipcharts. Open the Shared Library, supplied on a CD, for a wealth of resources which you can use, manipulate and save. This library is intended to be shared with multiple users.

Your Personal Library allows you to save your own resources, or you can browse folders on your computer for resources to use with your Flipcharts.

Customize ACTIVprimary

Customize the form and function of selected tools and features to change how you interact with ACTIVprimary. For more information about customizing ACTIVprimary to suit your personal working environment, see the section about **The Preferences Dialog**.

ACTIVprimary2.0 Top Features

ACTIVote software is integrated with ACTIVprimary for instant feedback during teaching.

The integrated **ACTIVslate** Controller allows you to control your board remotely, with use of an ACTIVslateXR or ACTIVslate IR (available separately).

Annotate over your Desktop in two modes: Transparent Window Mode and Mac OS Desktop Screenshot Mode.

Record speech to accompany your flipchart using the **Sound Recorder** Tool.

The **Clock Tool** allows you to display an analog or digital clock, or use a counter for timing activities.

Click the **XY Origin Tool** to add a new center of rotation point anywhere on the page. When activated, this allows you to rotate, mirror or flip objects according to the position of the new origin point.

The **Ruler Tool** which you can use for drawing straight lines using the cm, inches or mm scales

The **Protractor Tool** which you can use for drawing arcs and segments of the needed angle

Color in objects intelligently with the **Fill Tool**

Use the Color Picker Tool to copy colors from your Flipchart objects and add them to your custom color selector.

ACTIVprimary is by utilizing user profile and system user folders.

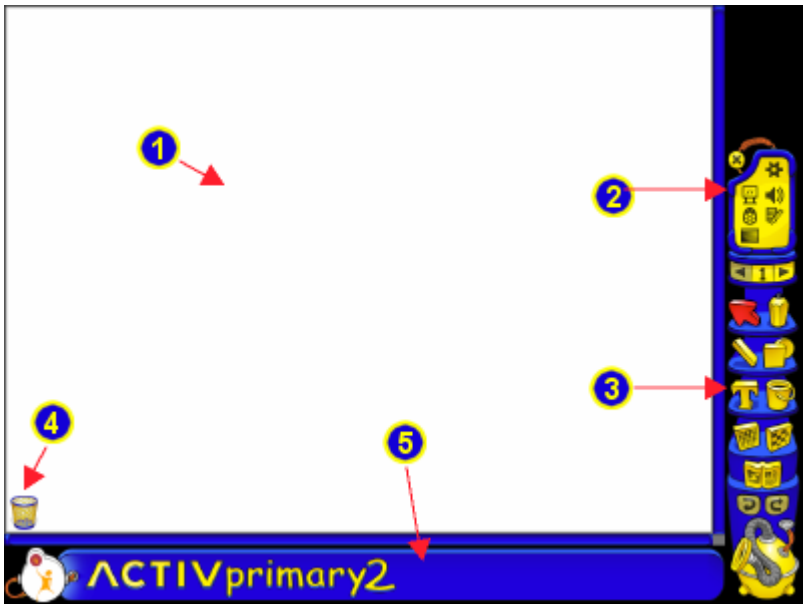
A new button in the Text Tray allows you to select fonts which are installed on your computer.

Use the Link Object feature to create flipchart objects that link to websites, documents, and applications.

Automatically group together annotations which are drawn within a certain proximity and time.

Interface

ACTIVprimary has been developed with the delivery of primary education in mind. ACTIVprimary provides a user interface that the pupils will find friendly and easy to use. The tool buttons have been designed to be easily recognizable visually and moreover accessible.



The interface is split into two distinct sections, a pupil interactive area and a teacher administrative area.

1 Flipchart	The Flipchart is your main workspace area, in which you open, prepare and deliver your presentation.
2 Teacher Interface	The teacher administrative section has a selection of Tool buttons that carry out functions you will want to control. Also allows you to access a range of menu functions.
3 Pupil Interface	The Pupil interface section has a selection of Tool buttons that gives you and your pupils a wide range of functions to interact with.
4 Flipchart Bin	Drag objects directly into the bin to remove them from your Flipchart page.
5 Tool Tray	Provides easy access to a useful set of Tool functions or resources to use with your Flipchart. The items displayed depend on what Tool button is selected in the Pupil or Teacher Interface.

Pupil Interface

Displays the current **Page Number**. Also, you can click the Page Selector button to open the Page Tray.

Navigate through your Flipchart pages with the **Previous Page** and **Next Page** Tools.

Drag objects around the screen with the **Selection Tool**.

The **Pens, Highlighters and Erasers** button displays a selection of drawing Tools with a range of sizes and colors available.

The **Lines** button displays a set of pre-drawn lines from the Resource Library.

The **Shapes** button displays a set of pre-drawn shapes from the Resource Library.

The **Text** button allows you to place text objects on the screen. These are fully editable and can be displayed in a variety of fonts, colors and sizes.

The **Fill** button allows you to select colors and fill objects with a range of colors.

The **Grids** button allows you to select from a range of grids in the Resource Library. They can be set so that objects snap to the grid.

The **Backgrounds** button allows you to select from a variety of backgrounds, which will display full screen, in the Resource Library.

The **Resource Library** button allows you to access to a huge range of multimedia resources. These are categorized for easy selection.

The **Undo** and **Redo** buttons.

The Page Selector button

At its simplest this button will update to reflect the current page number. Click the **Page Selector** button to update the Tool Tray with thumbnails of your Flipchart pages. This is called the Page Selector.

Click any one of the thumbnail images to view that page of the Flipchart. If your current document contains more pages than can be displayed, the **Next Page** and **Previous Page** buttons appear. Use these to scroll through all available pages.

When you are working in Design Mode, the **Page Organizer** button will appear in the Page Selector Tray. See the **Page Organization** section for more information.

Previous Page and Next Page buttons

Use the Previous Page and Next Page Tools to navigate through the pages in your Flipchart.

When you open a new Flipchart it contains only one page. To add a page to your Flipchart click the **Next Page** button and the Flipchart will open the second page.

The page number in the title bar will update to indicate the page number as you create more pages or move through the Flipchart.

Page Turn Effects

To enable or change page transition effects open ACTIVprimary Preferences at Page Turn Effects pane that will allow you to set to turn pages with either 3D, 2D or Random effects, set Duration, Step Size or disable from playing transition effects in case your computer's video card model is old and lacks sufficient video memory. Please refer for recommended hardware specification on the CD box outlet.

The Selection Tool button

Allows you to manipulate objects on screen. The Selection Tool is enabled by certain other Tools. For example, when you use the Shapes Tool to add a shape, the Selection Tool is automatically enabled so that you can move your shape around the screen. The Tool Tray has no user definable options for the Selection Tool, so the ACTIVprimary logo is displayed whilst this Tool is enabled:

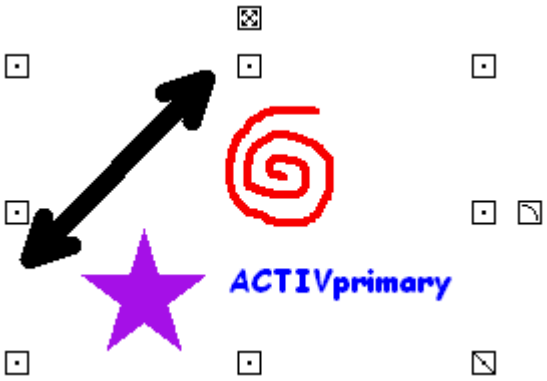
Selecting Objects

Click an object to select it. Or, to select multiple objects:

Click and drag the cursor over the objects you want to select. As you drag the cursor, a grey transparent rectangle will be drawn to indicate the selected area. Release when you have surrounded the object(s).

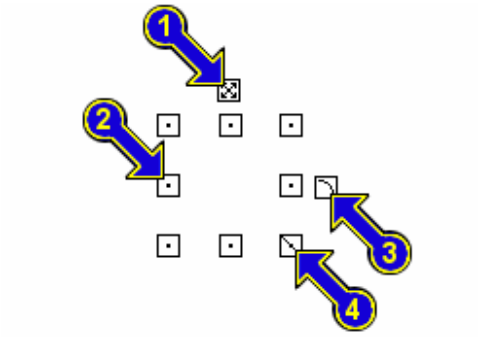
It is not necessary to completely surround an object for it to be selected.

You can select non-adjacent objects by selecting an object and holding the Command key when you click other objects you want to add to your selection.



The selected area will be surrounded by selection handles.

Handles



1	Free mover	When you hover the ACTIVpen over the Free Mover selection handle, the cursor changes to indicate that you can move the object in any direction.
2	Aspect independent sizers	The white selection handles are aspect independent sizers. The corner selection handles allow you to resize the object in width and height, whereas the edge selection handles will allow sizing in one direction only. You can also resize multiple selected objects using the selection handles to enlarge or decrease the collective shapes.
3	Rotate handle	When you hover the ACTIVpen over the Rotate handle, the cursor changes to indicate that you can rotate the object. Click the ACTIVpen onto the rotate handle and move the ACTIVpen to rotate your object around its center. The object rotates in real time, so you can see the visual effect of the rotate as it happens.

Also you will notice a **numerical display**

as you rotate the Pen Object indicating the angle of rotation. You can use this as a guide if you plan to independently rotate numerous objects and you wish to rotate by the same amount. The rotation is set to snap to the nearest degree and increments in whole degrees only.

When you release the pen your object will stay at the rotated angle.

If multiple objects are selected, you may also rotate them in real time as though they were one object. Use the Rotate handle in that same way as for a single object.

You can change the center of rotation for all objects on the page by using the **XY Origin Tool**.

4 Aspect sizer

Drag this handle to enlarge or reduce the object whilst maintaining its aspect ratio. By this we mean that you will resize the object without any distortion.

Double-click within the selection area to open the **Object Properties Palette**, which contains useful Tools for manipulating the selected object.

Moving Objects

To move an object simply click any part that belongs to the object and drag to a new location. Whilst a group of objects is selected you can move them as one object. Drag any of the objects within the selection area to move the selection.

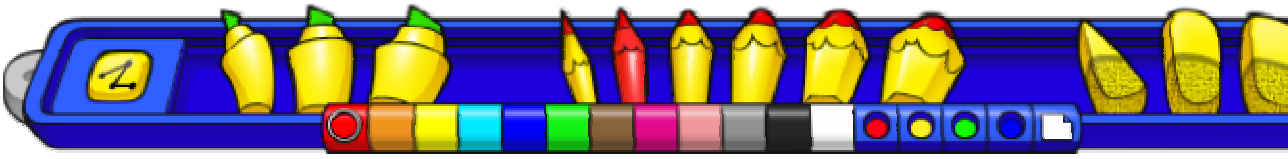
Copy and Paste

In Design Mode, Control-click selected object(s) to open the contextual menu that allows you to use the copy function. Then, Control-click a Flipchart page to paste it, or paste text or images from the Clipboard.

See **Using the Control-click** for more information about the contextual menus.

The Pen, Highlighter and Eraser Tool

When you select this Tool button, the Tray will update to reveal a set of Highlighter, Pen and Eraser Tools.



Pen Tool

The second narrowest Pen Tool is selected by default. Use the Tray to select the Tool you require and use the color selectors on the bottom edge to draw in that color. The nib of the pen will be updated to reflect the color choice.

In addition to the preset color selectors you also have four **user definable selectors** . To define a color, double-click one of the four boxes and select a color using the Color Picker that appears.

Now annotate on the board with the pen.

Highlighter Tool

Use the Highlighter Tool to draw over annotations, text, images and other objects with a translucent pen. This allows you to emphasize text, or another object, with a translucent color to draw attention to certain parts of your presentation. Like the Pen Tool, you can select any color in the Color Picker and the nib will be updated to reflect the chosen color. However, lighter colors work best because it's easier to see through them.

Eraser Tool

The Eraser Tool allows you to remove any mistakes that you may have made when annotating with the Pen or Highlighter Tools. You can erase the whole or part of an annotation object. The Eraser Tool does not actually physically remove the annotation. Instead, it adds a transparent layer on top of the annotation that allows the background to show through.

Note that the color selectors automatically disappear if one of the Eraser pens is selected.

You can select the eraser object and move it like any other object. As you move it over some annotations it will rub them out and others it will not, depending on whether the annotation was added before or after using the Eraser Tool. This is because annotations are placed in an order according to when they were performed, so you will have to move the Eraser object forward, for example bring it to the front of the order, if you want it to apply to all the annotations. Read more information about this in the **Layers** topic.

Remove Annotations

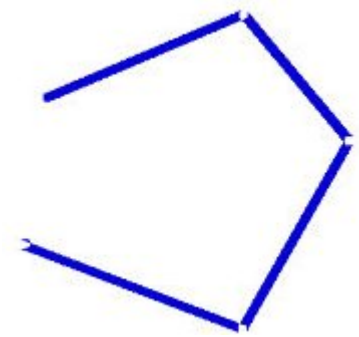
- Click the **Undo** button, if applying the pen/highlighter stroke was the last action.
- Drag the annotation across to the Flipchart Bin, if displayed.
- Double-click the annotation and select the **Delete** button from the Object Properties Palette.
- To remove all annotations on the page, click the **Wipe Clean** button and choose **Clear annotations** .

Move Annotations

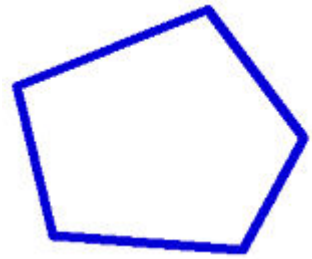
To move your pen/highlighter annotations click the **Selection Tool** then drag the annotation to the new location.

Point to Point mode

When you click the **Draw Point to Point** button, it will change color to red to indicate that it is selected.



In point to point mode, the Pen and the Highlighter will draw in straight lines. Click at the start point and the Tool will draw a continuous line from point to point each time you click the pen or highlighter.



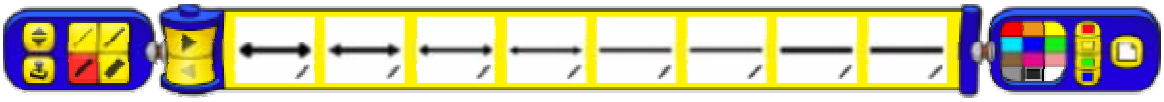
To finish drawing in Point to Point mode:

1. Click the point to point Tool once more to exit this mode.
2. Click another Tool button in the Toolbox.
3. Or, click the Flipchart page close to the very first point where you started to draw the current line.

In the case of number 3, the lines will close to form an enclosed shape but it will remain as an annotation object. The enclosed shape can be colored in with the Fill Tool, see the section about the **Fill Tool** for more information.

The Lines Tool

Click the Lines button and the Tool Tray will update to reveal an assortment of lines from the Lines folder of the Resource Library:



Refer to **The Resource Library** for more information about using the Resource Tray.

The **Categories** button enables you to select from a library of Line types. Click this button to open the Browse Category Palette and select lines from a different folder.

If the Lines category displayed contains more thumbnails than can be displayed you will notice that the **More Lines** and **Previous Lines** buttons become active. Use these to scroll through all available lines in that category.

Draw a line

To draw a line in the currently selected line width and color, click the line type you require. A line will be drawn on the page. You can alter the line width by clicking one of the four preset widths available in the lower Tray before you click the line type.

You can also select a preset color from the lower Tray before you add the line. In addition to the preset color selectors you also have four **custom color selectors**  . To define a custom color, Control-click one of the four boxes and select a color using the Color Picker that appears.

To draw multiple copies of a line, click the **Rubber Stamp** button. For more information about using the Rubber Stamp mode, refer to the section about the **Resource Library**.

Delete a line

- Click the **Undo** button, if drawing the line was the last action you carried out.
- Drag the annotation across to the Flipchart Bin, if displayed.
- Double-click the line and select the **Delete** button from the Object Properties Palette.
- To remove all images, lines, shapes and text objects from the page, click the **Wipe Clean** button and choose **Clear objects** .

Manipulate the line

You will notice that when you selected the Line Tool, the **Selection Tool** was automatically enabled. This allows you to manipulate your Lines straight away.

- Quickly adjust the length and angle of the line, move the ACTIVpen so that it is near one of the line ends. The cursor will change to the line stretcher. Click the line end and drag it until the line is the desired length and angle.
- Easily adjust the length of a horizontal or vertical line using the **handles** at each end of the line.
- To move a line, position your ACTIVpen over the line then click and drag the line to a new location.
- You can also rotate a line using the **Rotate** handle.
- To see the edit options for a line object, double-click it to view the **Object Properties Palette**.

The Shapes Tool

Click the Shapes button and the Tool Tray will update to reveal an assortment of shapes from the Shapes folder of the Resource Library:

Refer to **The Resource Library** topic for more information about using the Resource Tray.

The **Categories** button enables you to select from a library of shape types. Click this button to open the Browse Category Palette and select shapes from a different folder.

If the Shapes category displayed contains more thumbnails than can be displayed you will notice that the **More Shapes** and **Previous Shapes** buttons become active. Use these to scroll through all available shapes in that category.

Draw a shape

To draw a shape in the currently selected color, click the shape type you want. The shape will be drawn on the page. You can change the color by clicking one of the color selectors available in the lower Tray before you click the shape type. To define a custom color, double-click one of the **custom color selectors**  and select a color using the standard Color Picker.

Your shape can also have a different outline color. The Shape Tray proposes four width settings for your outline (no outline, narrow, medium, and thick):

To draw multiple copies of a shape, click the **Rubber Stamp** button. For more information about using the Rubber Stamp mode, refer to the section about the **Resource Library**.

Delete a shape

- Click the **Undo button** , if drawing the shape was the last action you carried out.
- Drag the shape to the Flipchart Bin, if available.
- Double-click the shape and click the **Delete** button on the Object Properties Palette.
- To remove all images, lines, shapes and text objects from the page, click the **Wipe Clean** button and choose **Clear objects** .

Manipulate the shape

You will notice that when you selected the Shape Tool, the **Selection Tool** was automatically enabled. This allows you to manipulate your shapes straight away.

- Adjust the size of the shape using the **handles**.
- To move a shape, position your ACTIVpen over the shape and then drag it to a new location.
- To rotate a shape, position your ACTIVpen over the **Rotate** handle then drag the shape around.
- To see the edit options for a shape object, double-click it to open the **Object Properties Palette**.

The Text Tool

Click the Text button and the lower Tool Tray will update to show the text options.

To add text, click at the location you wish to type and you will see a flashing cursor. You can use a physical keyboard to type your text. Alternatively you can use the floating keyboard on the ACTIV board.

Floating Keyboard

To access the Keyboard click the **Keyboard** button located on the far right of the lower Tray. The floating keyboard will be displayed.

Adult version

Control-click the keyboard, then choose **Adult Small** or **Adult Large** from the contextual menu.

A standard "QWERTY" keyboard is displayed.

Operating System version

To use the Operating System keyboard, go to **Teacher Tools Menu button > Menu > Preferences > User Input** and select the **Use keyboard supplied with Operating System** option. The virtual keyboard supplied with your Operating System is displayed.

For more information about this version, refer to the separate help file supplied with the keyboard.

About the adult keyboard

The function keys can be toggled on or off using the **F** key located at the top of the keyboard. You can toggle the numeric keypad on or off by clicking the **Expand** button.

You can toggle through different character sets by clicking the **S** key located at the top of the keyboard. Use the shift and caps lock keys as you would on a conventional keyboard.

Text Tray

Font Options

The **Current Font**

button shows the style of the currently selected font.

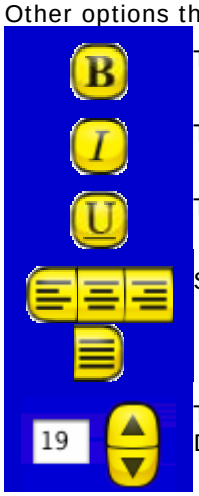
To change the font style for a new text object, click the **Current Font** button and choose a font from the pop-up menu. Six recently used fonts will be displayed in the list, the most recently used being at the top of the list. Click the font style to select it. Each time you choose one from the list, it will be placed at the top and all other styles will move down one place. The Current Font button will be updated to show the style of the font chosen.

If the Current Font list does not contain the style you want to use, click the **Choose Font**
button and specify a font style using the dialog that appears. The new style will be placed at the top of the Current Font list and the style at the bottom of the list will be lost.

For existing text objects, double-click the text object and click the **Edit Text**
button. Highlight the text then click the **Current Font** button, or click the **Choose Font** button to specify a font using the dialog that appears.

Text objects will retain their font properties, even if the font is not available in the Current Font list.

Other options that can be changed are outlined below:



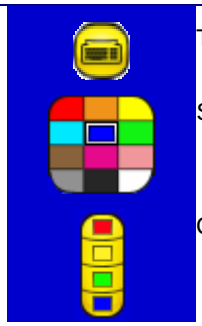
Toggle **Bold** on or off with this button

Toggle ***Italics*** on or off with this button

Toggle **Underline** on or off with this button

Select **Left**, **Centered**, **Right**, or **Justified** with these buttons

Type in the desired font size or click up or down arrows to Increase or Decrease font size.



Toggle the Floating Keyboard on or off with this button

Select font color with these buttons

Custom font colors

Once added, the text object is fully editable and you can move it around the page by enabling the **Selection Tool** .

Editing Text Objects

If you wish to edit the text, double-click the text to open the Edit Toolbox. Use the tools in the Edit Toolbox to perform the following actions:

Increases the size of the text object.

Decreases the size of the text object.

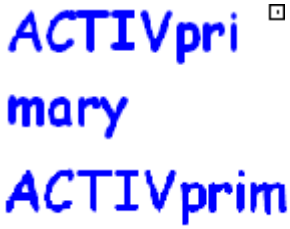
Deletes the selected text.

Duplicates the selected text.

Allows you to edit the text object.

Manipulating Text

All text that you enter is enclosed in a Text Area. You may want to manipulate this area to determine text flow, take the following example:



The text area is too narrow to take the whole line of text. By clicking and dragging the Text Selection handle ⊡ it is possible to widen the Text Area to fit the text onto one line.

This image shows the effect of dragging the Text Area control to increase the width so that the text can fit.

Text will automatically flow and extend the depth of the Text Area to the minimum that it needs to fit in; you have full control over the width of a Text Object.

Using the various options it is possible to format your text in a variety of ways, the following example shows some of the formatting that you can achieve with this Tool:

Deconstruct text

The deconstruct feature is a convenient way of duplicating text, or parts of text to create a new text object. Deconstruct text in the following ways:

During text edit

Highlight the portion of text you want to duplicate and drag it away from the original text object. A new text object is created which contains only the text that you highlighted.

Text objects

Select the text object you want to duplicate, then double-click it and choose **Deconstruct word** from the contextual menu. A new text object is created which is a duplicated copy of the original text object.

The Fill Tool

Click the button and the lower Tool Tray will update and display a range of colors.

The red outline around a color selector indicates the currently selected preset fill color.

In addition to the preset color selectors you also have four user definable selectors. To define a color, double-click one of the four boxes and select a color using the standard Color Picker.

Use the Fill Tool to add color to your Flipchart pages. You can change the color of annotations and text, or color in anything on screen including:

- Freehand annotations
- Text objects
- Images or clipart
- Shape outline and fill
- Flipchart background color

To use the Fill Tool, select a fill color and click the part of the object you want to color.

Annotation Objects

You can change the color of the annotation itself or fill in any area, which is enclosed by annotations, to create a fill shape.

Change the color of annotations

To select a new color for your annotations, click an annotation and it will change to the new color. Click as many annotations as you need to in order to change the color.

Fill in areas which are enclosed by annotations

The area does not have to be enclosed by one continuous annotation, but the annotations must form a complete shape. When filled, the area will be converted to a shape object, which you can edit and manipulate as normal. If you want the fill shape and annotation objects to stay together as one object, you can group them together. The section about the **Identification properties** explains how to group and ungroup objects.

Lines and Shapes

Click a line or shape (fill or outline) to change the color of it to the selected color.

Text Objects

Click the text that you want to change the color of. The complete word will change to the new color. If you want to change the color of the complete text object and it contains multiple lines of text, you will need to click the Fill Tool on every word. However, there is a more efficient way to change the color of lots of words. Ensure you are in Design Mode, then double-click the text object and select the **Edit Text** button from the **Object Properties Palette**. Use the cursor to select all words you want to change, then select a color from the Text Tray.

Images or Clipart

When used with images or clipart, the Fill Tool acts like a color replacer, which replaces all instances of a color on the image with a new color from the color palette. Click a color in the image that you want to replace with the selected color. You may not get the result you expected since minor changes in color, which are not visible to the eye, will not be filled. This means that you may need to click the image several times before all of the color is replaced.

There are many images ready to be colored in the Resource Library:

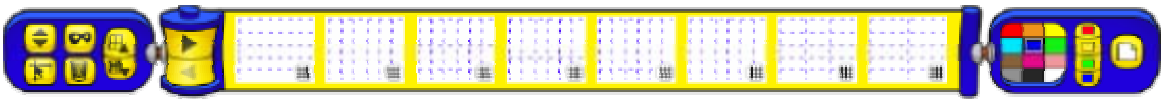
Page Backgrounds

The Fill Tool makes it easy for you to change the color of the page background. Click the Flipchart page background. The color of the background has now been changed.

The Grid Tool

Grids are useful for a wide range of activities, such as positioning objects accurately, creating guidelines and adding scale to your demonstrations. The grid can be scaled to make an exercise easier or harder.

Click the Grids button and the Tool Tray will update to show an assortment of grids from the Grids folder of the Resource Library:

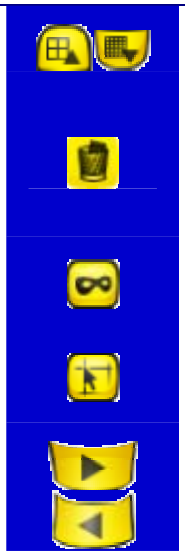


The **Categories** button enables you to select from a library of grid types. Click this button to open the Browse Category Palette and select grids from a different folder.

Applying a Grid

To apply a grid in the currently selected color, click the grid type you require. You can alter the color by clicking one of the color selectors available in the lower Tray before you click the grid type. To define a custom color, double-click one of the **custom color selectors** and specify a color using the standard Color Picker.

The Grid is located in the background and any objects on screen will overlay the grid. When you have a grid in your flipchart, the buttons that change the grid settings become active:



The Scale Up and Scale Down buttons allow you to set the size of the Grid.

The Clear button allows you to remove the Grid.

Also, to remove all objects and grids from the screen, click the Wipe Clean button and choose Clear Screen from the Wipe Clean Menu.

The Mask allows you to hide the Grid from view and still snap objects to grid points, if the snap to grid function is enabled.

The Snap To button activates the grid points and allows you to line up objects by attaching them to specific grid points, even when the grid is hidden.

The More Grids and Previous Grids buttons allow you to scroll through all available Grids in the selected category.

The Backgrounds Tool

By default each page of your Flipchart has a white background. ACTIVprimary allows you to change this to another color or display an image from the Backgrounds folder of the Resource Library.

Explore the backgrounds and images folders to find matching resources. Add text and other objects to create activities that enable powerful learning opportunities.

Background images

Click the Backgrounds button and the Tool Tray will update to reveal an assortment of background images from the Backgrounds folder of the Resource Library:

The **Categories** button enables you to select from a library of background types. Click this button to open the Browse Category Palette and select backgrounds from a different folder.

If the Backgrounds category displayed contains more thumbnails than can be displayed you will notice that the **More Backgrounds** and **Previous Backgrounds** buttons appear. Use these to scroll through all available backgrounds in that category. Note these buttons only appear as required.

Apply a background

To apply a background, click the thumbnail of the background you require. To change a background, click another thumbnail and the current background will be replaced with the new one.

Delete a background

When a Background is applied, the Tray displays an additional button, which is called the **Clear** button. Click this button to remove the background.

Also, to remove all objects and backgrounds from the screen, click the **Wipe Clean** button and choose **Clear Screen** from the Wipe Clean Menu.

Choose Color

The quickest way to change the color of your Flipchart background is to use the Fill Tool. Click a color to select it and move the ACTIVpen over to your Flipchart page. When the **cursor** changes, click the page to apply the new color. See the section about the **Fill Tool** for more information.

Upon choosing a color, you will find that the background color of the current Flipchart page is changed to your chosen color.

Default page background color

An additional color selector is available on the following Trays:

- Pens, Highlighters and Erasers
- Lines
- Shapes
- Text
- Fill
- Grid

This color represents the default page color specified in the **Flipchart Settings**. You can select this color to use with your Tools, like the other color selectors. If you have changed the color of the page background and you change it back to the default color, these objects will be hidden against the background of your page.

Merge an object into the Background

Lock an object on the background layer so that it forms part of the background. Ensure you are in Design Mode, then Control-click the object and choose **Lock on Background** from the contextual menu. Once locked, you will not be able to select, edit or view the properties for the object. The object will sit on top of the background color or background image which has been applied to the page.

Locked background objects are independent to the page background. If you cut, copy, clear a background, or add it to the Resource Library, the locked objects will not appear.

To unlock the objects, Control-click the page and choose **Unlock Background Objects** from the contextual menu. All locked objects will be moved from the background layer to the back layer, where they can be selected and edited again

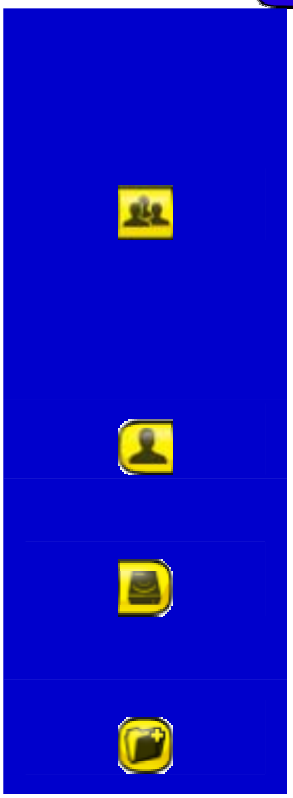
While locked, you can change the color of the object, or part of it, using the **Fill Tool**. You can also pick a color from your object using the Color Picker Tool.

The Resource Library

Click the Resource Library button and the Tool Tray will update to display thumbnail images of your Shared Collections folder. By default resources from the Families folder are displayed in the Tray.

Browse Category Palette

The **Categories** button opens the Browse Category Palette:



Opens the Shared Resource Library, where you can share resources with multiple users. These files are typically located on a computer network.

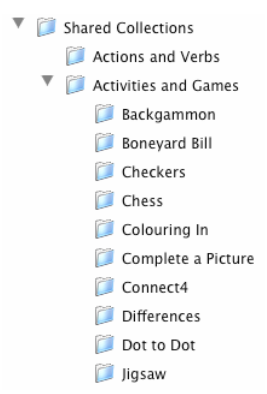
When you open the Resource Library for the first time, your shared library will automatically open. This enables you to start using the resources which were supplied with ACTIVprimary and installed into the shared resource library.

Place your shared Resources in an agreed place on the network to make the resources publicly available. Refer to the section about setting up your resource location for more information.

Opens your Personal Resource Library, where you can keep your own resources. These files are typically located on your computer.

When you select the Other Location button, an **extra button** will appear. Click this button to open another window where you can browse for resources located in folders on your computer. Select a folder then click **OK** to view the resources in that folder, or **Cancel** to close the window.

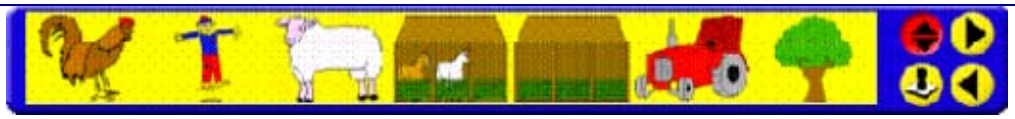
Available in Design Mode only, this option allows you to create a new folder for your resources. See the topic about **Adding Resource Categories** for more information.



List of resource categories.

Click a folder to update the thumbnails in the Tray with resources from that folder.

The resources contained in each folder can be of any object type; images, sounds, backgrounds, grids, lines, shapes, annotations or text objects.



If the Resource Library Tray contains more thumbnails than can be displayed you will notice that the **More Resources** and **Previous Resources** buttons become active. Use these to scroll through all available Resources in the selected category.

When you browse through the Resource Library, you may notice an icon located at the bottom right hand corner of some thumbnails. This icon identifies what type of resource it is and exists for the following objects:

- Annotations
- Lines
- Shapes
- Text
- Grids
- Backgrounds
- Flipchart pages
- Flipcharts

Add resources to the page

When the **Resource Library** button is selected, the **Selection Tool** is automatically enabled so that you can select and add resources to your Flipchart page. Drag a resource thumbnail to a page to add this object. To move an object, position your ACTIVpen over the image until you see the cursor displays with **free mover handle** , then click and drag the object to a new location.

To see the edit options for an object, double-click it to open the **Object Properties Palette**.

Rubber Stamp Mode

Rubber Stamp mode can be used with; annotation, image, line, shape and text objects.

Select the **Rubber Stamp** button to paste multiple copies of an object onto a page. The button will turn red to show that it is selected. Click a thumbnail then position and click the ACTIVpen around the page to paste multiple copies of the object. To stop adding objects, click the Rubber Stamp button to disable it.

You can manipulate and edit the objects as normal once they are pasted onto the page.

Sound Files

Many sound file formats are supported by ACTIVprimary, see the section about the **Sound Controller / Recorder** for more information. It is possible to control up to 2 different sound files simultaneously. To insert a sound file simply locate the sound file you require in the Resource Library, which are easily identified by the **sound icon** .

Drag the thumbnail of the sound icon to a page and it will be inserted on the screen, where you can drag it to a new location. Click the sound icon to activate the sound. Ensure that your computer is set up to play sound files and that you have the volume set to a suitable level.

Adding Resources to the Resource Library

In Design Mode, save your backgrounds, flipcharts, grids and objects to the Resource Library, or to a folder on your computer to store them for future use.

This topic describes saving resources to the Resource Library. When you save resources into the Resource Library they will always maintain the original property for that type of object.

To the Collections Folder

The Collections folder allows you to build a theme folder with all resources in one location that you may need for an activity.

Flipchart Objects

You can save single objects or you can combine multiple object types and save this into the Resource Library as a single entry. Add objects to your Resource Library by dragging them from the Flipchart page into the appropriate Resource Tray. For example, you may have taken a brown hat image out of the Library, used the Fill Tool to change it into a red hat, and now you want to save it to a different folder. When you drag an object to the Resource library it saves all properties of that object, including which layer it is on.

You can save any type of object(s) to the Collections folder. Click the Resource Library button and select the Categories button to display the folders in the currently selected library.

Click the Shared or Personal Library button to open the Collections folder in that Library. Click the folder name in which you want to save your resource. The Resource Tray will display a thumbnail image for each resource located in that folder. Click the **Close** button to close the Category Window.

Ensure you are in Design Mode, then click the Resource and drag it from the Flipchart page to the Resource Tray. When the cursor changes to the **Add Resource** cursor, release the click. The screen will update with a dialog box asking you to name your new resource:

Click a button to select the input type (Keyboard input is always acceptable):

Pen input

When in Pen Input mode write the folder name in the yellow text box using the ACTIVpen. ACTIVprimary will use the handwriting recognition function to convert the handwriting into text.

Click the Pen Input button, which will turn **red** to indicate that it is enabled. The dialog will also update as below:

Using your ACTIVpen write the new category name into the large yellow text box, then click the **Recognize** button. ACTIVprimary will now recognize your handwriting and will enter the recognized text in the lower textbox. Sometimes the recognition engine will get it wrong. You can have as many attempts as you wish.

Use cursive writing, not separate letters to improve the result.

To attempt the process again, click the **Redo** button. The entry will be wiped clear and you can try again. Or, if the recognition was almost correct, you can click into the recognized text and manually edit it.

Floating Keyboard

Invoke the Floating Keyboard to input the folder name using the virtual keyboard application supplied with ACTIVprimary.

Once you are happy with the new resource name, click the **OK** button.

Backgrounds and Grids

Add backgrounds and grids to a Collections folder so that you have all the resources for a specific topic or activity in one place. Click the Resource Library button and click the Categories button to display the folders in the currently selected library.

Click the Shared or Personal Library button to open the Collections folder in that Library. Click the folder name in which you want to save your resource. The Resource Tray will display a thumbnail image for each resource located in that folder. Click the Close button to close the Category Window.

When the background or grid is displayed, ensure you are in Design Mode then Control-click the page and choose **Add Background to Library...** or **Add Grid to Library...**. Enter a name for the resource as described above.

To the Lines and Shapes Folders

These folders allow you to save line and shape types of resources to their specific folder. The lines and shapes can be added to their resource folders with a text object, but not with any other type of object.

Click the Lines or Shapes Tool button and the Tool Tray will update to reveal an assortment of resources from the Lines or Shapes folder of the Resource Library. Click the Categories button and select the folder in which you want to save your line or shape. Click the Close button to close the Category Window.

Ensure you are in Design Mode, then click and drag the Resource from the Flipchart page to the Resource Tray. When the cursor changes to the **Add Resource** cursor, release the click. Enter a name for the resource as described above.

Certain properties are not preserved such as; line color, line width, shape fill color and shape outline color. This is because these are user selectable features of an object.

If the Locked property has been applied to a line or shape object, it will be removed before adding it to the Resource Library.

To the Backgrounds and Grid Folders

Click the **Backgrounds** or **Grids** Tool button and the Tool Tray will update to reveal an assortment of resources from the Lines or Shapes folder of the Resource Library. Click the **Categories** button and select the folder in which you want to save you line or shape. Click the **Close** button to close the Category Window.

Apply a background or grid to your page and manipulate it so that it is displayed correctly.

Ensure you are in Design Mode, then Control-click the page and choose **Add Background to Library...** or **Add Grid to Library...**. Enter a name for the resource as described above.

When saving a grid into the Grid folder, its current color will not be preserved, since this is a user definable property. However Grids added to the Resource library will retain all set properties.

To quickly create a background, drag an image into the backgrounds Tray and enter a name. The image will tile depending upon its size, but you can alter how the backgrounds fits to the page in the Appearance properties.

Creating Resource Folders or Categories

It is a good idea to categorize your resources to make it easier for you, your pupils and other members of staff to find suitable resources for a particular topic. ACTIVprimary allows you to create multiple tiered folder structures within the Resource Library in order to manage your resources. When you first open the Resource Library and view your Shared Collection, you will see that the resources are categorized and presented in a meaningful hierarchical folder structure.

In order for you to maintain this, we provide you with the means of adding your own resource categories to the structure. You can add new folders and sub-folders in the Backgrounds, Grids, Lines and Shapes categories.

Adding a new Category

In Design Mode, open the Browse Category Palette and select the folder in which you want to add the new folder, click the **New Folder** button and enter a name for the folder. Click the **OK** button. Your folder will be displayed in the Browse Category Palette and you can now drag your resources into the folder.

Click the **Resource Library button** . The Tray will update to show the current resource category. Click the **Categories** button to open the Resource Library Categories window:

To add a new folder you must first look at the current folder structure.

The topmost folder is called the root folder. This folder contains many sub-folders, or categories, of resources. If you want to add a new folder you need to determine its position in the structure first.

New Category

To add a new category, click the root folder to select it. The folder will be highlighted.

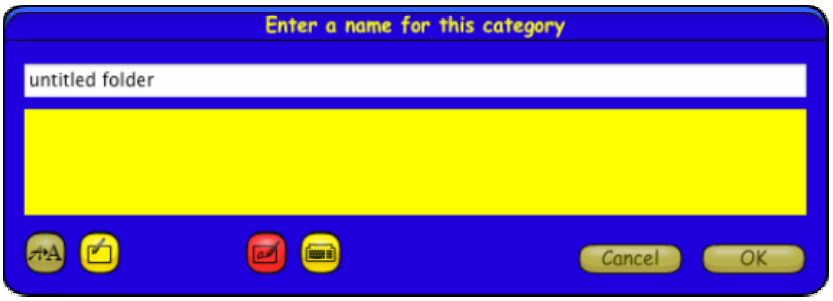
Click the **New Folder** button. The **Enter the name of your new category** dialog will appear:

Click a button to select the input type (Keyboard input is always acceptable):

Pen input

Write the folder name in the yellow text box using the ACTIVpen. ACTIVprimary will use the handwriting recognition function to convert the handwriting into text.

Click the Pen input button, which will turn **red** to indicate that it is enabled. The dialog will also update as below:



Using your ACTIVpen write the new category name into the large yellow text box, then click the **Recognize** button. ACTIVprimary will now recognize your handwriting and will enter the recognized text in the lower textbox. Sometimes the recognition engine will get it wrong. You can have as many attempts as you wish.

Use cursive writing, not separate letters to improve the result.

To attempt the process again, click the **Redo** button. The entry will be wiped clear and you can try again. Or, if the recognition was almost correct, you can click into the recognized text and manually edit it.

Floating Keyboard

Invoke the Floating Keyboard to input the folder name using the virtual keyboard supplied with ACTIVprimary.

When you have specified the new category name you want, click the **OK** button to create the new category. The dialog will close and the Browse Category Palette, containing your new category, will open.

The new category will be selected since it is assumed you will want to use this new category straight away. Because this category is brand new there will not be any resources in the lower Tray and it will appear blank. This new category is now ready for you to **add resources**.

Adding Sub-Categories

To add a sub category, select the main category name and click the **New Folder** button. Enter a name for your new sub-category, as before, and click the **OK** button. Your new sub-category will be listed alphabetically. Repeat this for each set of categories and sub-categories you require.

There is no limit to the number of categories or levels of sub-categories you can create.

Use the ACTIVresource Manager to organize your resources more effectively.

Deleting Resources

You can delete resources that are located in the Resource Library, or in any location on your network (assuming you have the relevant access rights).

To delete a resource, Control-click the thumbnail image of the resource you wish to delete, then choose **Delete Object from Tray** from the contextual menu that appears to remove the item.

You will be prompted to confirm your action.

Click the **Delete** button to permanently remove the object.

Click the **Cancel** button to leave the object in the tray.

This action is permanent and cannot be reversed by the Undo Tool. Deleted Object will be placed into System Trash Bin so if it was deleted unintentionally you will be able to recover it by moving in Finder from Trash to your particular folder.

The Undo and Redo buttons

The **Undo** function has an unlimited capacity; it will undo all actions that have occurred right back to the start of the current session.

The Tooltip tells you what the undo action is when you hover the cursor over the Undo Tool. Undo is available for as long as there are actions to reverse on the active Flipchart page. Each click the Undo Tool reverses one more action. If you want to reverse many actions, click the Undo Tool as many times as necessary to remove the changes and go back to a certain point on the Flipchart page.

The Undo Tool is only limited by the number of actions performed on a Flipchart. When there are no further actions to reverse, the Undo button is dimmed, and the Tooltip will display as empty.

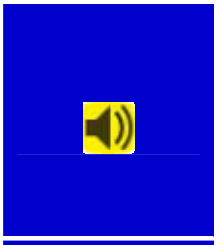
The **Redo** function will also redo all actions right back up to the most recent action. It follows the same rules as the Undo Tool in that it is only limited by the number of actions that need to be reapplied. Each click the Redo Tool reapplies one more action. If you want to reapply many actions, click the Redo Tool as many times as necessary to perform the actions.

If you edit the Flipchart after using the undo Tool you will lose the redo history beyond that point.

Teacher Interface

The **Quit** button allows you to quickly quit the application.

Clicking the **Teacher Tools** button will display a flyout Tool strip. This Tool strip contains a range of administrative functions. The Teacher Tools Menu button also indicates which mode you are working in; Design or Present Mode.



The **Sound Controller/Recorder** button allows you to select one of the following options:

Sound Controller	For the playback of up to 2 simultaneous sound files.
Sound Recorder	For recording voice and other sounds.

The **ACTIVities Explorer** button allows you to locate a range of supplied interactive activities.

The **Wipe Clean** button displays a choice of clearing the screen; you can clear the whole screen or just remove the annotations.

The **Special Tools** button will display a new tray along the base of the screen containing a variety of Tools.

The **ACTIVote** button starts a new voting session.

The **Desktop Mode** button minimizes ACTIVprimary to a small Toolbox allowing you to access your desktop.

The Quit button

Click the Quit button to close the ACTIVprimary program. If you have not saved your changes to a Flipchart you will be prompted to do so.

Click the **Save** button to save your current Flipchart and quit the application.

Click the **Don't Save** button to quit the application immediately without saving your Flipchart.

Click the **Cancel** button to continue working with ACTIVprimary application.

Recovery

If ACTIVprimary shuts down unexpectedly, it will attempt to recover the Flipchart you were working on the next time you start the application. ACTIVprimary will normally preserve all actions carried out up to the event that caused the application to quit.

When prompted, click the **Recover** button to open the recovered Flipchart. Or, click the **Don't Recover** button to open ACTIVprimary with a new Flipchart.

To save the recovered document click the **Save Flipchart** button located in the teachers Tools menu. To abandon the recovered Flipchart click the **New Flipchart** button located in the teachers Tools menu.

The Teacher Tools Button

This button allows you to access a range of administrative functions:

Click the **New Flipchart** button to create a new Flipchart.

The **Open a Flipchart** button allows you to choose to open a Flipchart from the Resource Library or from a another location on your computer.

The **Save a Flipchart** button allows you to save your current Flipchart to the Resource Library or another location on your computer.

Click the **Print** button to open the printer dialog and show the printing options.

Click the **Page Reset** button to reset the current page of your Flipchart to its saved state. This function only works on previously saved Flipcharts.

Click to show the **Page Notes** for the current Flipchart page. This can be used to store information gathered during a presentation or to store prompts for each page of a Flipchart.

Click the **Design Mode** button to switch between Design and Present Mode. Design Mode allows you to set properties on objects so that their behavior is controlled when you switch to Present Mode.

Click the **Menu** button to access a menu of further options, such as ACTIVprimary Preferences or to access the Promethean website.

New Flipchart

Click the New Flipchart button to create a new Flipchart. You will be prompted to save your current Flipchart if you have made any changes to it.

Click the **Save** button to save your current Flipchart, and create a new Flipchart.

Click the **Don't Save** button to abandon your current Flipchart without saving the changes, and create a new Flipchart.

Click the **Cancel** button to continue working with your current Flipchart.

Open Flipchart

This button allows you to access the Flipcharts located in your Personal or Shared Resource Library and in other folders on your computer. Click the button and choose from the menu:

Open from My Flipcharts	Takes you to the Flipcharts folder in your Personal Resource Library. Select the Flipchart file you want to open, then click **Open** to open the selected Flipchart file. Or, click **Cancel** to abandon the open function.
Open from Shared Flipcharts	Takes you to the Flipcharts folder in your shared Resource Library. Select the Flipchart file you want to open, then select **Open** or **Cancel**.
Open from Other Location (defaults to My Flipcharts folder)	Allows you to locate and open Flipcharts from a different location. Navigate to the correct location and select the file, then select **Open** or **Cancel**.

You may open a Flipchart to find that it doesn't display as you would expect. Check the fit and scale of the Flipchart because it may have been

authored in a different screen size. See Page Scale and Position Properties for more information.

Opening version 1.x Flipcharts

If you attempt to open an older version 1.x Flipchart, it will be loaded like a usual ACTIVprimary2 flipchart.

Save Flipchart

When you quit the application, ACTIVprimary will detect if there are any changes since you opened or last saved the Flipchart. If you haven't already done so, you will be asked if you want to save your changes before quitting the application. If in doubt you should always save your work.

Saving a Flipchart for the first time

When saving your Flipchart for the first time you will need to specify the location where you want to save it. Click the button and choose from the menu:

Save to My Flipcharts	Saves the Flipchart to your Personal Flipcharts folder.
Save to Shared Flipcharts	Saves the Flipchart to your Shared Flipcharts folder.
Save to another location (defaults to My Flipcharts folder)	Navigate to a location where you want to save your Flipchart.

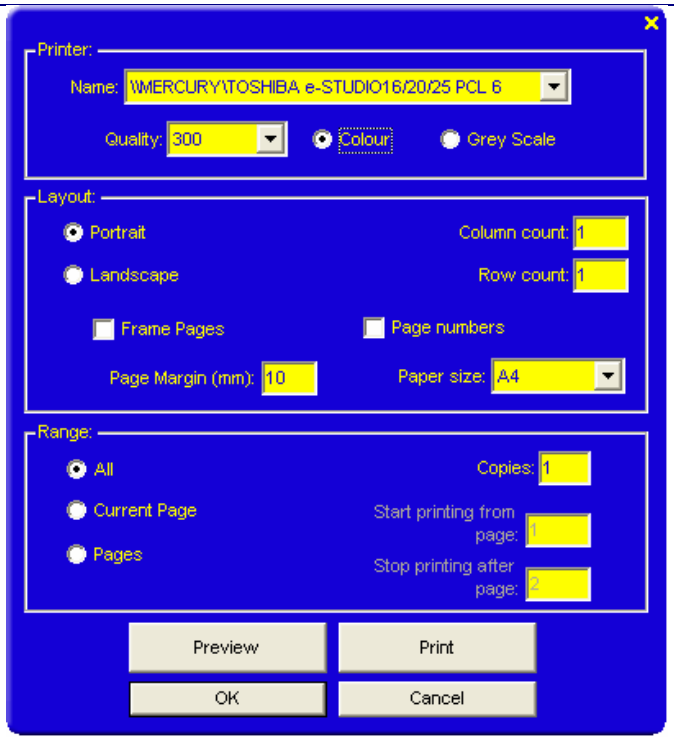
Type in a filename then click **Save** to save the Flipchart to that location, or **Cancel** to abandon the Save function.

Save changes to an existing Flipchart

If you want to save using an existing filename, ACTIVprimary will ask you if you want to replace the file. Click **Yes** to overwrite the file, or **No** to enter a different filename.

Print Flipchart

It is possible to print your Flipchart in a number of ways, you can print each Flipchart page individually or choose from a variety of settings which allow different layout options. Click the Print button to display the Print Dialog.



Printer

Name

Allows you to choose which printer to use. Your default printer will be listed in the Name option, but you can change this if you have multiple printers attached to your computer. Click the down arrow to display the list of available printers. This list will be unique to your system and will entirely depend upon the printers you have attached.

Quality

You can alter the print quality by clicking the down arrow next to the Quality setting.

For best and most economic results it is recommended that you start off at the lowest setting and print out a one page Flipchart to test the quality from your printer. You may find that a low setting produces acceptable results and saves expensive ink. Try adjusting the quality gradually until you achieve an acceptable output. You choice of printer greatly affects the quality of printing.

Color or Grey Scale

Allows you to print in color or force a black and white print from a color printer. The option has no effect if a color printer is not available.

Layout

Portrait / Landscape

Allows you to select the orientation of the paper.

Column count / Row count

Allows you to select how many Flipchart pages to print on each sheet of paper. Increasing the column number will increase the number of Flipchart pages across the sheet of paper. Increasing the row number will increase the number of Flipchart pages down the paper.

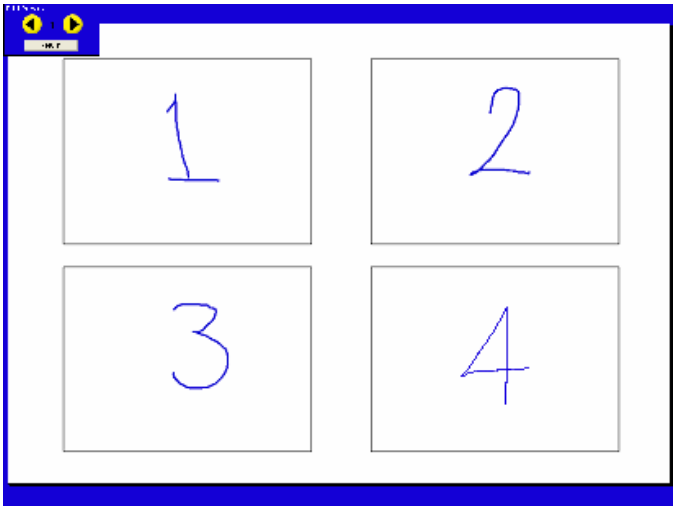
Example

This example demonstrates a four-page Flipchart printed with the settings adjusted as follows:

Landscape orientated paper

Pages fitted in two columns and two rows

Pages are framed.



Frame pages — Adds a frame border around your Flipchart page.

Page numbers — Adds a page number in the bottom left corner of your Flipchart page.

Page margin (mm) — Adds a blank space around the edge of the page.

Paper size — Choose a paper size from the **Paper size** pop-up menu.

Range

All / Current Page / Pages — Use these options to specify which Flipchart pages are printed, you may choose to print all of your Flipchart, the current page i.e. the one displayed in the Flipchart or you may specify a range of pages for example pages 2 to 6.

Copies — Allows you to send multiple copies of your page selection to the printer.

Printing and Print Previewing

Preview — Allows you to review your Flipchart pages before printing. The Print Preview window is displayed with a preview copy of your Flipchart page.

The preview displays the Print Preview Control dialog, which you can use to navigate through all print pages:

Click the arrow buttons to browse through the preview pages. ACTIVprimary will detect how many pages your flipchart contains so it won't allow you to create a new page when you reach the end of your pages, like the Next Page Tool does. The page number of the current page being previewed is displayed in between the two arrow buttons.

You cannot edit your flipchart whilst you are reviewing it in Print Preview mode.

	When you have finished reviewing your pages, click the **Return** button to go back to normal flipchart view.
Print	Prints the page(s) according to the options selected.
OK	Accepts the selected options and takes you back to your Flipchart without printing.
Cancel	Rejects the selected options and goes back to the default settings. Takes you back to your Flipchart without printing.

Page Reset

Reverts the current page of a previously saved Flipchart back to its saved state.

This feature is extremely useful if you have a Flipchart containing a prepared activity on the page. Your audience can play the activity, and then you can reset the activity for someone else to have a go.

If you are working on a Flipchart that has not been previously saved and subsequently opened, the Page Reset button is dimmed.

Page Notes

Clicking this button will open up the **Page Notes** 
.

Each page can have its own copy of Page Notes. The type of information can include:

- Set of instructions for an activity
- List of useful keywords or prompts
- Presentation outline, summary, or lesson plan
- Supporting notes for the Flipchart page with instructions on what to do with the page. This is particularly useful if you share work with other colleagues
- Information gathered from audience feedback

Move and Resize the Page Notes Window

To change the size of the window, drag the bottom-right corner of the window until it is the correct size. Perhaps you have a set of instructions that you would like the class to work through; you could set the window size so that you can scroll through one instruction at a time.

To move the window, click the title bar and drag the window to a new position on the screen. The next time you open Page Notes, the window will appear in the same place you left it previously.

Edit Text

It is also possible to paste selected text from the Page Notes palette onto the Flipchart page. To do this simply select the text you wish to paste to the Flipchart then click the **Add to Page** button. This button becomes active automatically when any text is selected.

Click the **Menu** button to open the **Text Tray**, which allows you to edit any text you have entered into the Page Notes window.

Whilst you are editing text in the Page Notes window and if you are in Design Mode, you can select the text and Control-click with the ACTIVpen to open a contextual menu. This menu allows you to perform common text editing functions such as cut, copy, paste, delete, select all and undo. This can be used to copy or paste text to and from the Clipboard, external applications or text objects.

Also, you can paste text from the Page Notes onto the Flipchart page.

Cut, Copy and Delete options will be unavailable if there is no text selected.

Design Mode

Design Mode allows you to work with objects on your Flipchart page, so that they appear or behave in a certain way when you switch to Present Mode. This makes it easier to prepare your Flipchart because in Design Mode you have the control to edit freely; you can set various object properties and Control-click the page to use useful editing functions. In Present Mode, these object properties are applied, so an object will behave as intended. For example, if you apply an action to a Flipchart object, you can interact with it when you switch to Present Mode.

Menu Button

The appearance of the Teacher Tools Menu button indicates which mode is currently selected:

Design Mode Present Mode

When you open ACTIVprimary for the first time, the Present Mode is selected.

Switching between the Design and Present Mode

Switch to Design Mode to author your Flipchart, then go back to Present Mode to view and interact with your Flipchart. You can switch between each mode at any time by turning the Design Mode on and off using the Teacher Tools Menu.

To turn the Design Mode on: click the **Menu** button, then click the **Design Mode** button. Notice that the apearance of the Menu button changes to the outlined gear inside broken lined square as indicated on the picture above.

You need to turn off the Design Mode to return to the Present Mode. To do so, click the **Menu button > Design Mode**. The appearance the Menu button changes back to solid black gear.

The Preferences dialog

Changing the ACTIVprimary preferences you can customize the form and function of selected Tools and ACTIVprimary features. To open the Preferences dialog, click the **Menu button > Preferences**. Click one of the tabs to open the corresponding pane and view the associated preferences.

A settings.ini file is automatically saved to the My Documents\ACTIVprimary 2 directory, which contains all the information about your ACTIVprimary preferences. If you work from different computers and your shared profile is located on a computer network, save your ACTIVprimary settings to your Shared ACTIVprimary2 directory so you can view ACTIVprimary in the same format from wherever you open it.

ACTIVote Settings

The ACTIVote settings allow you to define options for setting up and voting with the ACTIVote system.

Show results

You may choose to have the graph automatically show after all responses are received. If you choose not to display the graph, but then decide you would like to see it, Control-click the Flipchart page and choose **ACTIVote > View ACTIVote results** to view them.

Automatic page advance

Check this option if you wish ACTIVprimary to automatically turn the page after receiving answers when using a Question Flipchart. This would be a useful option if you require to give your audience a timed question paper - use this in association with the timeout setting of each question.

ACTIVote User Database

Displays the location of the User Database used by the ACTIVote application. Click the Browse button to select another database.

Adhoc/demo mode

Question timeout	You can set a default timeout that will be used when you ask an ADHOC question and also when you are using Demo Mode. To change the default timeout, type in a new value.
Apply timeout to prepared questions	Apply the question timeout for prepared questions.
Results to new Flipchart page	Select this option if you would like to save the results of the current question on a new Flipchart Page. Each subsequent question, will create a new Flipchart Page for the purposes of storing the question results. Clear this option to paste the results in the current Flipchart Page, in which case subsequent responses will overwrite any existing results.

Answers

Take users first answer only	If selected, your users will only be allowed to submit one response and further responses will be ignored. When all devices have voted, the timeout will stop immediately and if set the graph will be displayed.
Allow users to alter their answer	If selected, your users can answer, change their mind and submit further answers during the timeout period. They can continue to submit answers for the duration of the timeout period. When the timeout period has ended, further answers will be ignored and the results will be shown, if **Show Results** has

been selected.

Show names

This option will display user names during Named Mode or device names during an anonymous or demo mode. The names will be displayed beneath the timeout bar and will light up when a response is received from the user. The display allows you and the group to see who has answered and who has not by using color indicators:

Grey:	No response from user
Yellow:	Valid Answer from user
Black:	Out of range answer from user (e.g. the user pressed 3 to a question with 2 answers)

Fill in

This option gives you the ability to allow your users further chances to answer the question set. For example if you have a large audience say 50 people it is possible that not all users will answer in the allotted timeout period.

Clock Preferences

The Clock Preferences allow you to define options for displaying and using the Clock Tool.

Analog

Clock numbers

Select the **Clock numbers** option to view numbers around the Clock face. When this option is turned off, colored blocks will be displayed around the Clock face instead.

Second hand

Select the **Second hand** option to display the seconds hand. Deselect this option to display the hour and minute hands only.

Digital

24 Hour

Select the **24 Hour** option to view a 24 hour Clock. Deselect this option to view a 12 hour Clock.

Show AM/PM

Select the Show AM/PM option to view a 12 hour Clock with AM or PM displayed. Deselect this option to remove the AM/PM from display.

Seconds

Select the **Seconds** option to display the seconds counting. Deselect this option to view the hours and minutes only.

Show date

Select the **Show date** option to display current date underneath the time. Deselect this option to view the time only.

Flipchart Settings

The Flipchart settings allow you to change the default options for setting up, displaying and working with Flipcharts.

World color

World color is the background color of the Flipchart window, behind the Flipchart page. The default color is grey. To change the world color, click the color button and select a color using the standard color picker.

Default page color

The default color for new Flipchart pages is white. This setting allows you to set an alternative default color for new Flipchart pages. To change the color, click the color button and select a color using the standard color picker.

Remember that you can also use the Fill Tool to individually color in the page.

Flipchart Bin

Select this option to show the Flipchart Bin on your Flipchart. This allows you to drag objects directly into the bin to remove them from your Flipchart page.

You can drag the Ruler and Protractor Tools to the Flipchart Bin to remove them from a page.

The Flipchart Bin will remember its position when you close ACTIVprimary, so it will open in the same position the next time you open ACTIVprimary. Deselect this option to hide the Flipchart bin.

Flipchart Objects Settings

The Flipchart Objects settings allow you to define the options for high quality images and displaying objects and the Edit Toolbox.

High Quality

Images

Set the Images setting to **Fast, Low Quality** (fast loading of images with a less degree of antialiasing); **Slow, High Quality** (slower loading of images with a higher degree of antialiasing) or **Never Interpolate** (fast loading of images with no antialiasing). Increases the visual quality of any image when it is resized. This works particularly well when the size of an image is reduced. Select this option to enable the Images setting.

Select Never Interpolate option to disable the setting if your computer suffers from a significant slow down.

Image Manipulation

Set the Image Manipulation setting to **Fast, Low Quality** (fast redrawing of images during resize, drag, rotate with a less degree of antialiasing); **Slow, High Quality** (slower redrawing of images during resize, drag, rotate of images with a higher degree of antialiasing) or **Never Interpolate** (fast redrawing of images during resize, drag, rotate of images with no antialiasing). This setting only applies to manipulated images and not images that are displayed in their original size.

Select Never Interpolate option to disable the setting if your computer suffers from a significant slow down.

Video

Increases the visual quality of video playback.

Select Never Interpolate option to disable the setting if your computer suffers from a significant slow down.

This is a machine specific issue and is related to the quality of your graphics hardware.

Show Shadow

Show Shadow option when selected allows to add a real life effect when a particular object casts a shadow. Depending on what layer object is (Top or Middle) will result in the length of dropped shadow. Objects on bottom layer cast no shadow. Deselect this option to disable the setting.

Please note that having Show Shadow option on significantly decreases performance of your computer and requires that it has a more powerful video card and 16 and more MB of video RAM.

Notice that a Shadow won't be seen on a HTML output or print-outs.

Objects to Front

The Objects to Front setting allows you to override the 'stacking order' on a layer. When enabled, if you click an object it will be automatically displayed in front of other objects that are on the same layer. Select the option to enable the setting. Deselect this option to disable the setting.

For example, imagine a square is partially hidden behind a circle on a layer of your Flipchart and this option is enabled. When you click the square, it will appear in front of the circle and the circle will then be partially hidden behind the square.

General Settings

The General settings allow you to determine how ACTIVprimary is displayed and change options that define how ACTIVprimary uses various features.

Display Tooltips

Tooltips are small floating text boxes that appear when you hover the ACTIVpen over designated areas. Select this option to display Tooltips when you hover the cursor over Tool buttons or resource thumbnails in the Resource Library. This allows you to identify ACTIVprimary functions if you are not familiar with it.

Did You Know?

When this option is selected, the Did You Know window will open each time you start ACTIVprimary. Deselect this option if you don't want the Did You Know window to appear. This window contains many tips for using ACTIVprimary. It is recommended that you leave this option turned off until you are familiar with the application. You can spend some time looking at further facts by clicking the **Another** button. Once you have finished reading, click the **OK** button and ACTIVprimary will continue to open.

Desktop Annotate

Overlay Mode	This annotation mode is only available for users of Windows 2000 and XP. When selected, ACTIVprimary allows you to annotate over live applications and moving images. In this mode you can interact with the Desktop. For more information, refer to the section about annotating in Overlay mode.
Photo Mode	When selected, ACTIVprimary will allow you to annotate over a static image of the Desktop. For more information, refer to the section about annotating in Photo mode.

Linked File Hosting Settings

The Linked File Hosting settings allow you to define how links to external documents are displayed when they are added to a Flipchart page, and change the default URL for your Home and Search web pages.

Linked File Hosting

The Linked File Hosting setting allows you to select which media types are supported by ACTIVprimary. You can choose from the following media types:

Images
Text
Sound
Video
Microsoft Word, Powerpoint, Excel
Shockwave Flash Movies

Click the checkbox to enable the hosting for the corresponding media type. Deselect an option to disable the hosting for the corresponding media type.

Select the **Show Sound Controller** option to host sounds using the Sound Controller. The sound controller can playback up to 2 sound files simultaneously.

You can control and display web pages in a dedicated media window provided by ACTIVprimary, just select the **Use ACTIVweb browser** option. If you prefer not to use the dedicated window, deselect this option. The web page will then be hosted through your local web browser.

Web Links

Allows you to enter a URL for your default Home and Search webpages when using the internal web Browser.

The default settings are:

Home URL - http://www.prometheanworld.com

Search URL - http://www.google.com.uk

Language Settings

The Language settings allow you to localize the interface by specifying a language.

ACTIVprimary and its associated applications use the same language as the computer

Displays ACTIVprimary and its associated applications in the default language installed on your computer, which is the language used when you start your computer.

Select another language

Choose a language from the pop-up menu to display ACTIVprimary and its associated applications in that language. You may need to restart your computer for the new language setting to take effect.

Profiles and Resources Settings

The Profiles and Resources settings allow you to determine the location of your personal and shared ACTIVprimary files and settings.

Your files can be located on a specific computer or on a computer network. Saving your files on a network is useful because it allows you to access your Flipchart files, layouts, resources and settings from any computer within the same network. Your profile contains information about your personal settings and preferences, which is updated when you close the ACTIVprimary session.

For each new user, ACTIVprimary will automatically create the folder structure "\My Documents\ACTIVprimary2" as the default location for storing your personal ACTIVprimary files, such as Flipcharts, resources and settings. Each new user will also be pointed to a default location for shared resources.

However, you can override these default locations by choosing another location. To change the default location, select Another Location for the relevant path and click the corresponding More button. Then browse to a different location and select OK.

There are three paths to consider:

1. Profile stored in:

My documents	Saves all your personal ACTIVprimary settings and Toolbox layout to the folder "\My Documents\ACTIVprimary2".
Another location	Click the **Select...** button and navigate to a different location, to override the default location.

2. My ACTIVprimary files in:

My documents	Allows you to load and save all your personal ACTIVprimary Flipcharts and Resources within the folder: "\My Documents\ACTIVprimary2".

Another location	Click the **Select...** button and navigate to a different location, to override the default location.

3. Shared ACTIVprimary files in:

All Users	Allows you to access the shared ACTIVprimary Flipcharts and Resources. The shared Resources are available for installation separately (on the supplied ACTIVprimary CD). By default, the shared Resources are installed into a local shared folder structure such as "C:\Documents and Settings\All Users\Documents\ACTIV Software\ACTIVprimary2".
Another location	Click the **Select...** button and navigate to a different location, to override the default location for the shared Resources.

When you change any of the default locations, you are simply pointing ACTIVprimary to look for your files or resources at the new location. Your files do not automatically move. Use Finder to copy your files to the new location before you change the location in ACTIVprimary. Refer to your relevant Operating System documentation for information about copying or moving files.

Toolboxes Settings

The Toolbox settings allow you to define the appearance and behavior parameters for the Toolbox and Tray.

Main Toolbox and Trays

Toolbox Position	Use this setting to specify the location of the vertical Toolbox on startup. The Right option is selected by default, so the Toolbox is on the right-hand side of the screen. However, you can change this to the left-hand side of the screen by selecting the Left option. You can change the position of the Toolbox at any time whilst using the ACTIVprimary application. To switch the position of the Toolbox, Control- click (barrel button) the ACTIVpen close to the outside left or right edge of the screen. The Toolbox will switch instantly to that edge. This position will be remembered in the Toolboxes Settings. If you are using a screen resolution larger than 800 x 600 pixels graphics mode, you can also reposition the Toolbox vertically. Drag the Toolbox up or down the screen; release when it is in the correct position.
Tray Position	Use this setting to specify the location of the Tray on startup. Select the **Top** or **Bottom** option to ensure the Tray appears in that position. You can change the position of the Tray at any time whilst using ACTIVprimary. To switch the position of the Tray, Control-click (barrel button) the ACTIVpen close to the outside bottom or top edge of the screen. The Tray will switch instantly to that edge. This position will be remembered in the Toolboxes Settings.

Tray Effects

This option turns the Tray effects on or off. When the option is selected, the Tray slides up and down when it changes to update for a particular Tool. Deselect this option to de-select this option, so the Tray will simply appear rather than slide into place.

Start Effects

This option turns the start effects on or off. When the option is selected, the Toolbox slides on the screen when application starts. When you quit the application, the Toolbox slides out and the Flipchart fades out. If this option is turned off the Flipchart and Toolbox will simply appear.

Object Properties Palette

Show toolbox with double click	Select this option if you want the Object Properties Palette to display when you double-click an object. Deselect this option to stop the Object Properties Palette from displaying when you double-click an object.
Toolbox follows selection	Select the option if you want the Object Properties Palette to appear close to where you select an object.

Tools Settings

The Tools settings allow you to define options for the Toolbox Tools.

Dice Speed

The dice speed setting allows you to control the speed at which the dice are rolled. Move the slider, making small adjustments to find a speed you prefer.

Protractor and Ruler

Tool color	To change the color of the Ruler and Protractor, click the color button and select a color using the standard color picker.
Tool text color	To change the color of the Tool text, click the color button and select a color using the standard color picker.
Transparency	The Transparency setting allows you to adjust the transparency of the Ruler or Protractor. You can fade out the Ruler and Protractor so you can see through them and they don't cover up the content on the Flipchart. Move the slider between **See through** and **Solid**.
Show Cleaning Tool Effect	When this option enabled on using Cleaner Tool allows you to see a visual effect of Scribbles, Objects or entire page content to be "vacuum" cleaned of the flipchart and "sucked" inside a "vacuum" Cleaner.

User Input Settings

Use Keyboard Viewer supplied with Mac OS

Instead of using the keyboard that has been supplied with your Operating System, you may prefer to use the keyboard supplied with ACTIVprimary. Select this option if you would like to use the keyboard supplied with your Operating System. Deselect this option to use the ACTIVprimary Floating Keyboard.

Handwriting recognition language

System Inkwell Handwriting Recognition engine now has support for the following languages:

- English (US)
- French
- German

In order to use this feature you must switch the Recognition engine into the appropriate language mode. Click the **Teacher Tools Menu button > Menu > Preferences > User Input**. The User Input preferences will be opened. In the Handwriting Recognition language section, choose a different language. For this click **Show Ink Preferences...** button that will open for you Ink prefpane in the System Preferences, where from the **Language:** pop-up menu you can change to your prefered Handrwriting Recognition language, or **Cancel** to reject your change and close the Preferences window.

Menu

Clicking this button displays the menu system, which allows you to access more ACTIVprimary features and information. Choose one of the following options for more information:

Page Scale

When you click the Page Scale, a palette appears that allows you to scale the current page up or down from its original size. Choose one of the following scaling options:

Best Fit	Automatically scale the Flipchart page so that the entire page is visible.
Fit to Width (default)	Automatically scales the page so that it displays the page according to the best fit using the width of the current page. Scroll bars will appear if necessary.
Fit to Height	Automatically scales the page so that it displays the page according to the best fit using the height of the current page. Scroll bars will appear if necessary.
Original Scale	Automatically scales the page to its original size.
Other	Allows you to choose a percentage page scale from a selection.

When you select a page scale it is immediately applied to your page. If you scale down the Flipchart, the **World Color** (the colored area behind the Flipchart page) will be visible. Click the **Close** button to close the dialog.

It is possible for ACTIVprimary Flipcharts to support different page sizes within a single Flipchart. However ACTIVprimary does not allow you to create different page sizes, it only supports these if imported from ACTIVstudio 1.x or 2.x.

At any page scale, when you drag an object completely out of view, ACTIVprimary will automatically snap it back to the edge of the view window. Note: The edge of the view window is not necessarily the edge of the page.

Manage Resources

Use the ACTIVresource Manager to organize your Resource Library folders and resource content within the folders.

View the contents of a library

Select the relevant library icon in order to view the folders contained within that library:

Open folders in Personal Resource Library

Open folders in Shared Resource Library

Open folders from Other Location...

Click a folder to view a thumbnail for each file contained within that folder. The thumbnails will be displayed in alphabetical order.

Organizing the library folders

New

Control-click the folder that will be on the next level above your new folder. Choose **New Folder** from the contextual menu. Type a name into the textbox and click somewhere else, or press **Enter**. The new folder will be created.

Rename

Select the folder you want to rename and click the **Rename** button. Type the new name for the folder and click **OK** button or press **Enter**. The folder will be renamed.

You can only rename subfolders which reside below the top-most folder.

Organizing the library contents

Selecting

Whenever you click, or Control-click a thumbnail, the thumbnail image and the label will be highlighted in red. This is so you know exactly which thumbnail you have selected.

To select multiple thumbnails:

Adjacent	Click the ACTIVpen to the left of a thumbnail, then drag over the adjacent thumbnail. Or Select the first thumbnail in the selection then press the **Shift** key before selecting the last thumbnail. All thumbnails in between those you have selected will also be selected.
Non-adjacent	Press the **Command** key whilst you click the ACTIVpen on a selection of thumbnails.

Manipulating

Control-click any thumbnail to open a contextual menu which allows you to cut, copy, delete, rename or duplicate the thumbnail. Once you have cut or copied a thumbnail, the next time you Control-click in the thumbnail area for any folder, a paste option will appear. Click this to paste the cut or copied thumbnail into the currently open folder.

You can also drag a thumbnail from the thumbnail window over to a folder name in order to move the file to a different folder.

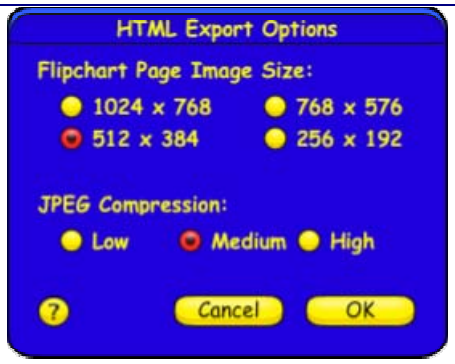
Export to HTML

Load or create the flipchart that you wish to export as a HTML pages.

To access the Export to HTML option:

1. Click on **Teachers Toolbox Menu** button
2. Click on **Menu** button on appeared menu tray
3. Select **Export to HTML...** menu item

ACTIVprimary2 will display the HTML Export Options dialog:

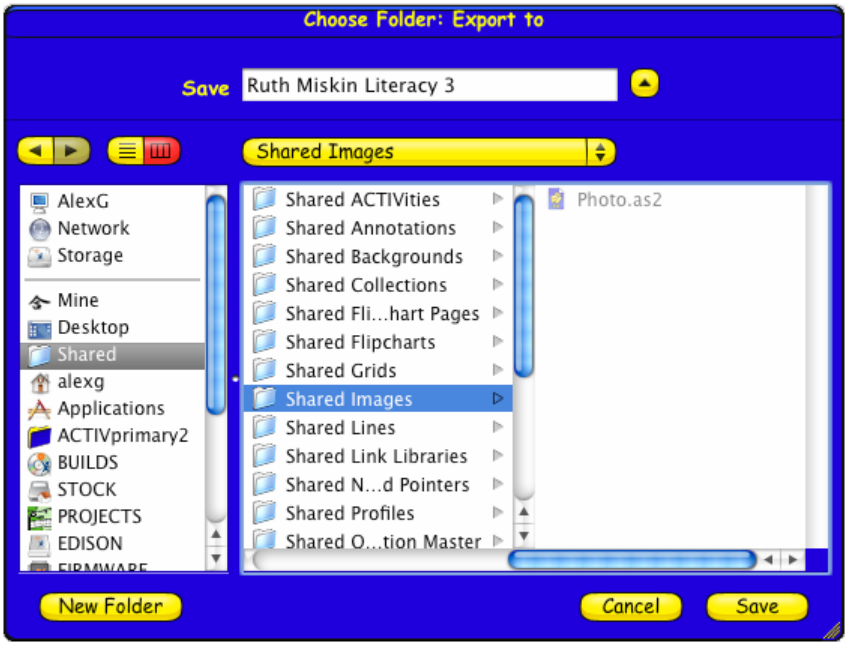


4. You can Set Flipchart Page Image Size (default is 512 x 384)

5. You can choose the amount of JPEG Compression to apply (Default is medium)

6. Click **OK** when ready

You will be prompted to choose the output folder where your HTML pages will be saved.



Use the Dialog box to locate or create the output folder then click on the Choose Button.

The HTML pages will be created and you will be asked if you wish to view them:

Click on the OK button and your saved html pages will be presented in your default web browser.

Sample HTML page output:

Promethean Website

This menu item will open your default web browser and connect to the Promethean Website, **www.prometheanworld.com**. Visit the website often for:

- Notification of related products or software releases
- Free upgrades or revisions to keep you informed of the latest features
- Access to the User Forum
- Helpful resources and education material for you to download
- Links to useful websites

ACTIVprimary Forum

Why not also visit the ACTIVprimary User Forum to discuss the use of ACTIVprimary in education with other users around the world. The Forum is moderated by product experts who welcome any comments and ideas so that we can improve future product developments.

We invite all new users to register and become members of our growing online community. You are encouraged to join and visit the forum regularly for news about updates to the ACTIV range of products, software and resources.

http://www.prometheanworld.com/common/html/vb_forum/index.php

ACTIVote Tool

The ACTIVote Tool button opens the ACTIVote software as a separate application, which is designed to work seamlessly with the ACTIVboard and ACTIVprimary software.

The purpose of ACTIVote is to generate user response via the ACTIV board when called upon to do so by the presenter. It gives instant feedback on user performance. Feedback can be displayed in various formats immediately on screen or may be exported to a spreadsheet for further analysis.

To start a session, click the ACTIVote Tool button. Choose a session type from the **ACTIVote Session** window. Then click the ACTIVote button once more to start the session. When all responses are received you can open the results window:

- Click the ACTIVote button once more.
- Or, in Design Mode Control-click the page and select **ACTIVote Results**.

Refer to the ACTIVote help system for more detailed information about using the ACTIVote system. This can be accessed separately from the ACTIVprimary menu system.

ACTIVote Session

Named

Named mode requires you to register physical devices to the ACTIVboard and then allocate each device to a specific user. This allows you to receive more feedback on user response.

Click the **Re-select Users...** button to register and allocate between users more devices.

Anonymous

Anonymous mode requires you to register physical devices to the ACTIV board and then any registered device can be used by any user.

Click the **Register Devices...** button to register your ACTIVote devices then choose the number of devices you want to use in the current session from the pop-up menu.

Demo Mode

Demo Mode where you use simulated devices to practice using the application. Enter the number of devices you would like to see in the demonstration.

Click **Apply** to proceed with the session, or **Cancel** to stop session and close the session dialog.

If you have already run an ACTIVote session, you may already have results attached to your current Flipchart. If this is the case, click the Clear button to delete the results before running a new session.

ACTIVote Question Settings

The ACTIVote Question Settings allow you to quickly define a question page in a Flipchart. To create a question page, add a text object for the each of the following:

- The question
- The correct answer
- Wrong answers
- Answer labels, for example; A, B, and so forth.

Ensure you are in **Design Mode**, then Control-click the page and choose **ACTIVote Question Settings**.

The ACTIVote Question Settings dialog

Question Page Type	Choose **Adhoc** or **Pre-prepared** from the pop-up menu. In order to use Pre-prepared Mode, you must have the question, answers and answer labels as text objects on the page.
Question Type	Choose the type of question you are asking from the pop-up menu so that the results display appropriately.
Correct	Choose the correct answer from the pop-up menu so that the results display the correct or wrong answer response from users.
Timeout	Enter the number of seconds to set the amount of time allowed for the users to answer the question.
Question, Label and Answers	Choose the relevant text object for the question, labels and answers from the pop-up menu.

Click **Apply** to accept the question page edits, or **Cancel** to remove any changes you have made.

When you open a question Flipchart, the **ACTIVote Session** dialog will automatically open with the Flipchart. If the Flipchart already contains results from a previous ACTIVote session, you will see a message. Click the **Delete Results** button to delete the results for the current question Flipchart.

ACTIVote Results

Once ACTIVprimary has accepted all responses it will automatically display the results in the form of a graph. The graph is displayed the same no matter which ACTIVote mode you are using.

Select one the options to display the results in different forms. Indicate the correct answer to a question by clicking the appropriate answer button along the top of the graph:

Answers A - F	Displays how many responses were received for each possible answer.
Who answered what	Displays the response from each ACTIVote device. When used in a Named Mode session, the device label will display the name of the user.
Right wrong	Displays a pie chart showing the percentage of right and wrong answers.
Overall scores	Displays the number of correct answers from each ACTIVote device or named user.
Summary	Displays the response from each device or named user. This graph allows you to see which answer they chose for each question, or if they did not respond at all.

Select the **Response Times** option to display how long it took each user to answer each question.

The Response Time is only displayed on certain graph types.

Click the **Paste** button to paste a copy of the displayed graph as an image object onto your current Flipchart page.

You can also export your ACTIVote results to a spreadsheet or text file. Click the Teacher Tools Menu button > Menu > ACTIVote>> and select Export ACTIVote Results to Excel..., or Export ACTIVote Results to Text...

When you have finished viewing the results but you don't want to delete them, click the **Close** button in the top left corner of the window. To open the results window again, ensure you are in Design Mode and Control-click the Flipchart page, then select **ACTIVote > Show ACTIVote Results...**.

When you have finished looking at the results, click the **Clear** button to delete the results from the current page. The page will then be ready for a new voting session.

ACTIVslate Controller

The ACTIVslate provides remote control of cursor from anywhere in the room. By simply moving the ACTIVpen over the ACTIVslate surface, you can move the cursor around the desktop. Pressing the pen nib on the ACTIVslate surface produces a mouse click. Clicking the button on the pen barrel produces a Control-click. Pressing the pen nib on the ACTIVslate surface twice in quick succession produces a double click. Use the ACTIVslate to annotate on your Flipcharts and perform tasks in ACTIVprimary2 as though you were standing at the ACTIV board.

Communication to and from the ACTIVslate takes place via infrared or radio signals, depending on which version of the ACTIVslate you are using. When you use the ACTIVpen on an ACTIVslate, the information is transmitted from the ACTIVslate via transceivers. The data is then sent, via cables, to computer and converted into mouse data.

From the Teachers toolbox menu go to the ACTIVslate menu to open up either your **ACTIVslate IR** or **ACTIVslate XR** Controllers.

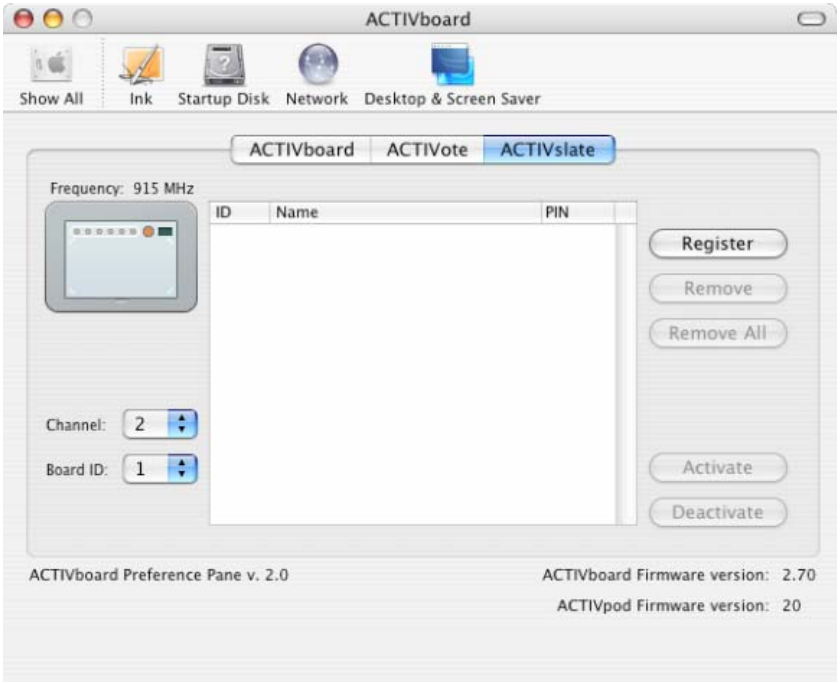
You can learn on how to **Register ACTIVslate XR...**.

Refer to the ACTIVslate documentation for more information about using the Controller and the ACTIVslate.

Only one ACTIVslate can be activated at any one time. The decision as to which ACTIVslate is enabled is at your discretion and is selected via the ACTIVslate menu.

Register ACTIVslate XR

ACTIVslates XR need to be registered through the ACTIVboard system preference panel, in a similar way to ACTIVote devices.



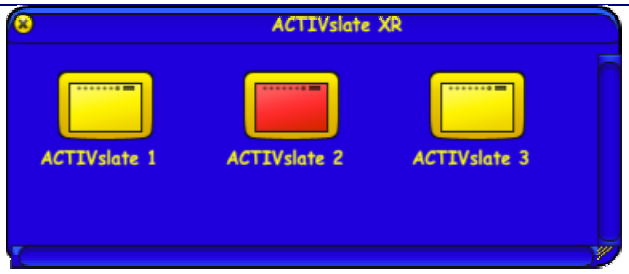
To register an ACTIVslate, click on **Register**, and use the ACTIVpen to select the Register Button on the ACTIVslate. The preferences pane will display a dialog with PIN number, which you must enter by pressing the ACTIVpen on the appropriate Mode Boxes on the ACTIVslate. The registered ACTIVslate will be displayed in the Registered devices window. Once registered, click on **Activate** to enable an ACTIVslate to control the computer cursor.

ACTIVslate XR Controller

Prior to accessing ACTIVslate XP Controller make sure devices are registered through the ACTIVboard system preference panel. You can learn on how to **Register ACTIVslate XR...**.

To open up ACTIVslate XR Controller from the Teachers Toolbox Menu select Menu button, go to ACTIVslate menu and select ACTIVslate XR menu item.

Any registered ACTIVslate XR devices are displayed in a window. The ACTIVslate ID is used to identify each ACTIVslate.



To enable an ACTIVslate click on the required icon, which will become highlighted in red to show that it is enabled. To disable an ACTIVslate, click on the highlighted ACTIVslate icon a second time, removing the highlight.

ACTIVslate IR Control

To open up ACTIVslate IR Controller from the Teachers Toolbox Menu select Menu button, go to ACTIVslate menu and select ACTIVslate IR menu item. This will show the window as follows:

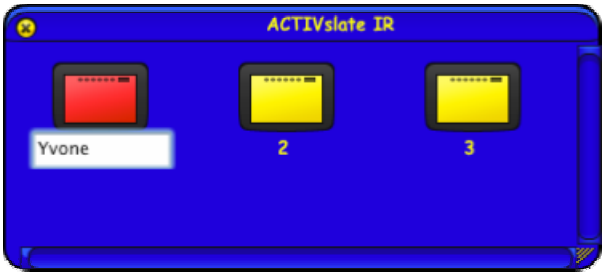
The ACTIVslate panel may be moved around the screen by 'clicking and dragging' on any part of the surrounding grey border area.

Initially it is shown assumed 3 ACTIVslates IR are present. You can alter this number to reflect the quantity of slates you have. This can be achieved right clicking onto the panel that will reveal the following window:

Here you may enter the number of slates you require, up to a maximum of 64. This number is recorded in a configuration file.

Naming ACTIVslate (s)

You can provide each of your ACTIVslates with a name of up to 16 characters. To do this simply activate an ACTIVslate IR device by clicking to its image, then click to the name under the appropriate ACTIVslate, type the required name followed by the **Enter** key. In this example we are renaming ACTIVslate 1 from 'ACTIVslate' (the default name) to Yvonne:



The name of each ACTIVslate is shown on its LCD panel. When changing the name of an ACTIVslate, the name on its LCD panel will only be updated when the ACTIVslate is next used (i.e. when communication takes place between the ACTIVslate and the ACTIVboard).

Note: Each ACTIVslate has a unique ID number that is displayed in the ACTIVslate LCD panel. In the above example only ACTIVslate with ID No 1 will be renamed "Yvonne", the other two slates will ignore this 'name change' command.

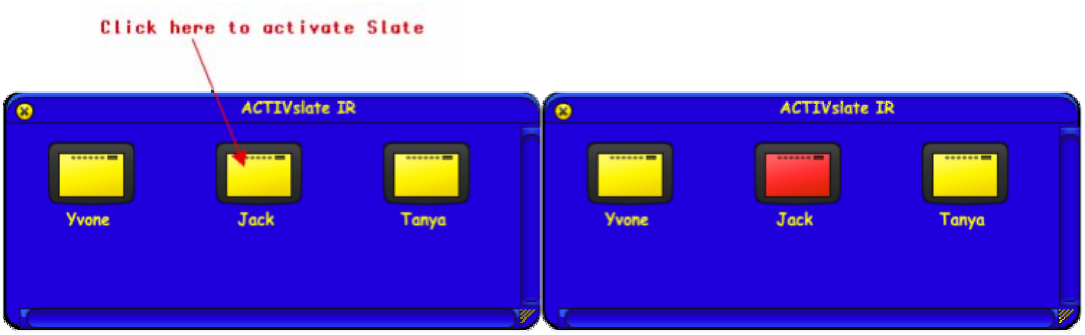
Using this facility you may name any/all of your ACTIVslates. All names will be retained by the application in a configuration file. Also, each ACTIVslate will permanently store its own name on the Slate itself.

It is important to understand that the system will use the ACTIVslate ID to identify Slates and NOT the ACTIVslate name. The Control program assumes your Slates are numbered 1, 2, 3, so you should ensure you number your slates accordingly (see Chapter 1 of the ACTIVslate manual).

For reasons of clarity we recommend you give each of your ACTIVslates a different name.

Enabling / Disabling an ACTIVslate

The default condition is that ACTIVslate No 1 is enabled. In order to enable an ACTIVslate, simply click on the required Slate icon to enable it. In the following example we have named all three Slates and are enabling ACTIVslate ID No 2:



Once enabled, the ACTIVslate can be used to control the computer mouse cursor.

In order to disable an ACTIVslate, simply click on the highlighted ACTIVslate icon a second time, removing the highlight.

Note: You may enable and disable any ACTIVslate at any time but only one ACTIVslate can be enabled at once.

The Sound Controller / Recorder button

Click this button and choose one of the options from the pop-up menu; **Sound controller** or **Sound recorder**.

Sound Controller

The Sound Controller allows you to playback audio files during a presentation. It can control up to 2 different sounds simultaneously.

Add a sound object to your Flipchart

The audio file must first be added to the Flipchart. Use either of the following methods to add the audio file to your Flipchart:

- Drag a sound object from the Resource Library. The sound object will be displayed on the Flipchart as a sound icon. When you hover the cursor over the sound object, the cursor will change to indicate that you can click the object

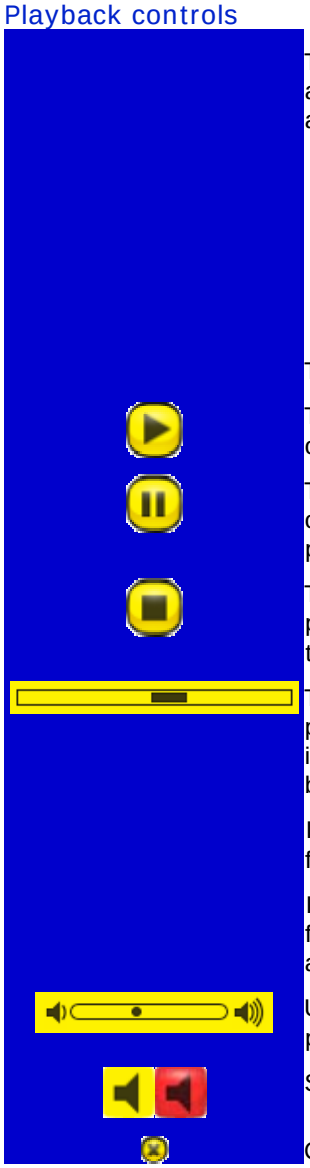
and link to a file. Click the object to open the Sound Playback Controls and play the audio file.

- Create a link object, which references the audio file from your Flipchart. See the section about **Creating Link Objects** for more information.

ACTIVprimary supports the following popular audio file formats .aif .aifc .aiff .au .cda .mid .rmi .midi .mp3 .snd .wma .wav.

Click the Sound Controller Tool button and select **Sound controller** to show the playback controls, which are used to control your audio file.

Playback controls



The track number is used to control the playback of different types of audio file. ACTIVprimary will play a sound file on Track 1 or Track 2 according to the type of audio file it is playing.

Track Number	Audio filename extension
1	Plays speech or sound audio files, such as: .wma.wav.snd.au.aif.aifc.aiff
2	Plays complex or music audio files, such as: .mp3.cda.mid.rmi.midi

The title of the track will be displayed below each control.

The Play button starts the playback of an audio file. Select the Repeat option to automatically replay the sound when it has finished playing.

The Pause button suspends the current playback and holds the position of the progress indicator on the timebar. Click Play to continue playback from the position where the playback was paused.

The Stop button discontinues the current playback and moves the progress indicator to the beginning of the timebar. Click Play to restart the playback.

The Playback Indicator moves along the timebar to indicate the current position in the audio file. You can click the progress indicator and drag it to a different position on the timebar to quickly move forwards or backwards to a specific point in the playback.

If you move the indicator whilst Play is active, the audio file will play from the new position.

If you move the indicator whilst the Pause or Stop is active, the audio file will remain paused or stopped until Play is selected, where the audio file will playback from the new position.

Use the Volume Control to adjust the volume level and make your playback louder or quieter.

Select the Mute button to switch the sound on and off.

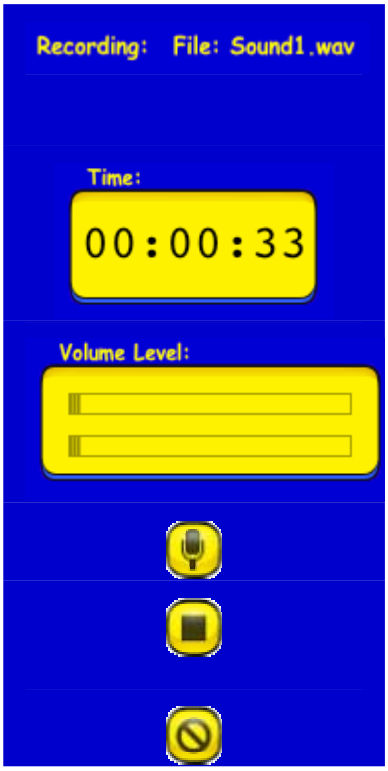
Close Sound Controller.

Sound Recorder

The Sound Recorder allows you to record speech to accompany your Flipchart. The speech recording will be added to your Flipchart page as an embedded sound object, consisting of an icon that links to the sound file. The object resides on your Flipchart page so you can replay the sound as many times as you wish.

Click the **Sound Controller Tool** button and select **Sound recorder** to show the record controls.

Recorder controls



The recording is automatically given a filename when you start to record your speech. Every time you click the **Record** button, the filename will be incremented by one.

Displays the length of recording. The time will continue incrementing until you click the **Stop** button to stop the recording.

The position of the moving bars will change according to the volume level of the recording. As sounds get louder, the color will change to red the further along it is to the right-hand side.

The Record button starts the recording.

The Stop button stops the recording and adds a sound icon on your Flipchart page that links to the sound file (.wav). In Present Mode, click this link to play the sound file.

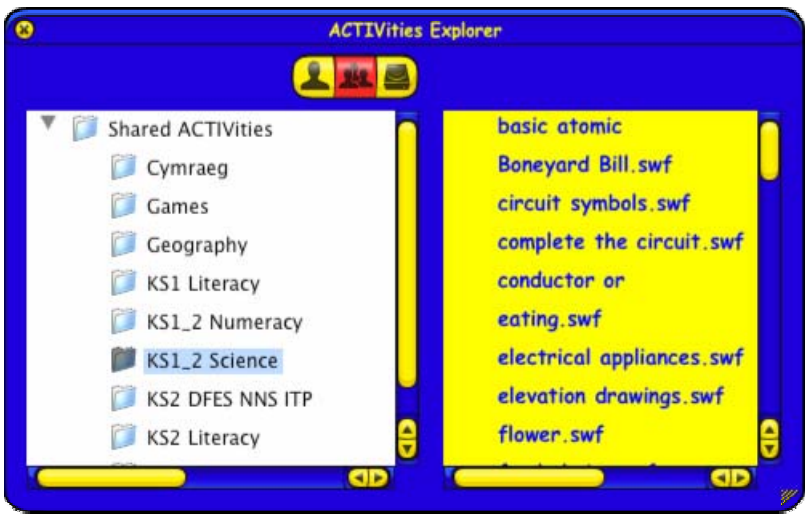
The Cancel button abandons the current recording. This button is redundant if nothing is being recorded.

Add the sound file to the Resource Library

In Design Mode, open your Personal or Shared Resource Library and click the Categories button to navigate to the folder in which you want to add your sound file. Click the icon and drag it to the Tray. Enter a name for your sound object and click the **OK** button.

The ACTIVities Explorer button

Click the ACTIVities Explorer button to view the ACTIVities Explorer dialog:



The ACTIVities Explorer displays the contents of the ACTIVity folder and sub folders. Promethean provides sample ACTIVities suitable for different primary levels. Click a folder in the left hand view pane and its contents will be displayed in the right hand view pane. To launch an ACTIVity, click an ACTIVity listed in the right hand view pane.

Depending upon the type of ACTIVity launched you will see the host application displaying the ACTIVity. It is possible to have a wide range of types of ACTIVities. They could be Flash animations, Word documents, PowerPoint presentations, and so forth.

If the ACTIVity is created as a Flipchart, the ACTIVity will be displayed as normal in the ACTIVprimary Flipchart workspace area. If the ACTIVity is created as another file, it will be launched in the relevant program, thereby hiding the ACTIVprimary main program, and the Desktop Toolbox will appear:

This floating Toolbox is displayed when ACTIVprimary is in Desktop Mode. For more information about using this Toolbox, refer to the topic about **Desktop Mode** in the Teachers Tools section.

To switch back to the ACTIVities Explorer dialog, click the **Close** button or press Command + Q. The appearance of the **Close** button will vary according to who authored the ACTIVity and what application is hosting the ACTIVity.

To close the ACTIVities Explorer close, click the **Close** button.

The Wipe Clean Button

Use the Wipe Clean button to remove objects from the page. Click the Wipe Clean button and choose one of the following options:

Clear Screen

Removes everything from a Flipchart page back to a clean page. This includes all annotations, objects, grids and backgrounds.

Clear Objects

Removes all lines, shapes, images, sounds and text.

Any Pen, Highlighter and Eraser objects that have been placed on the Middle or Back layer will also be removed. See the section about **Layers** for more information.

Clear Annotations

Removes all freehand Pen, Highlighter and Eraser objects only

Any Pen, Highlighter or Eraser objects that have been placed on the Middle or Back Layer will not be removed. See the section about **Layers** for more information.

Having used any of the Clear functions, you can then use the **Undo Tool** to immediately to re-instate what was removed if you removed something by mistake.

To remove specific objects from the page, use the **Selection Tool** to select the object(s), then double-click and click the **Delete** button on the Object Properties Palette.

The Special Tools button

Click the Special Tools button to display a range of useful Tools in the Tray.

The **Spotlight** Tool allows you to focus attention on an aspect of the screen or allows you to hide an aspect of the screen, depending upon which mode you choose.

The **Reveal** Tool allows you to hide the displayed page and use a window blind to reveal the underlying Flipchart from either the top, bottom, left or right of the screen.

The **Dice** Tool allows you to roll up to 5 dice using an animated sequence. The sum of the dice can be pasted on the page.

The **Protractor** Tool displays a virtual Protractor on screen.

The **Ruler** Tool displays a virtual Ruler on screen.

The **Fraction Maker** Tool allows you to convert handwritten fractions into editable text objects.

The **Handwriting Recognition** Tool allows you to recognize and convert your handwritten words into editable text objects.

The **Calculator** Tool allows you to perform mathematical calculations on a standard Calculator or a simplified child's Calculator, which is displayed in a floating window.

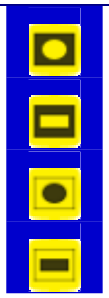
The **Camera** Tool allows you to capture an image of your desktop, ACTIVprimary interface or the contents of your Flipchart page. You can take a photograph of the complete screen, or you can define a specific area on the screen to capture only part of it.

The **XY Origin** Tool adds a new origin point on the page, around which you can rotate, mirror or flip objects.

The **Clock** Tool allows you to display a Clock or counter on screen.

The Spotlight Tool

When you click the Spotlight Tool on the Special Tools Tray, you are presented with four choices.



Circular Spotlight

Rectangular Spotlight

Inverse Circular Spotlight

Inverse Rectangular Spotlight

You would use either Circular or Rectangular shape for masking the screen to focus attention on a particular part of the screen:

Use the Inverse Spotlight to hide aspects of the screen whilst showing some instructions or clues as to the hidden part:

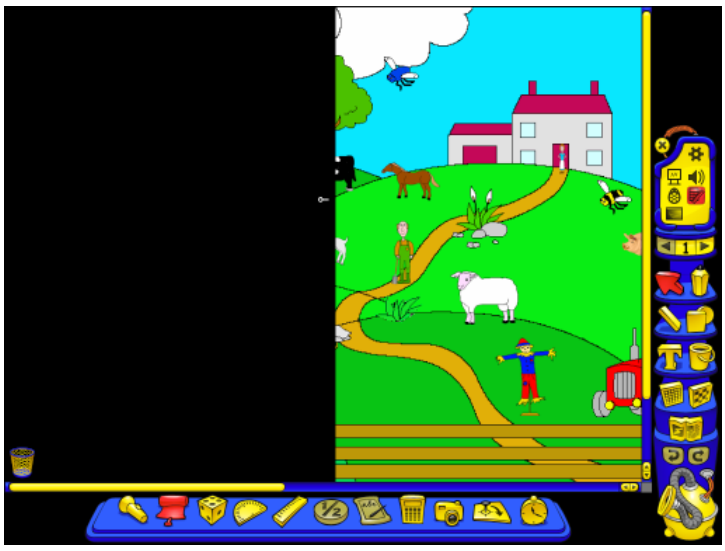
The Spotlight continues to be displayed as you move forwards and backwards through the pages of your Flipchart.

To resize the Spotlight, press the ACTIVpen down and drag the cursor towards the center of the Spotlight area to make it smaller, or away from the Spotlight center to make it larger.

To hide the Spotlight, click the Spotlight Tool button once more.

The Reveal Tool

This Tool allows you to completely cover up and hide the contents of your page. You can reveal in one of four directions from the top, bottom, left or from the right.



When you select the Reveal Tool from the Special Tools Tray, the screen will go black. At this point, imagine that ACTIVprimary has placed a piece of black paper over the screen. Use the ACTIVpen to move the cursor to one of the quadrants, then click and drag the black area to the opposite quadrant, gradually revealing the screen. When you have finished, slide the black area back to where you started so that it again covers the whole of the windows screen, or click the Reveal Tool button to remove the Revealer.

You can navigate through the pages in your Flipchart and the Revealer will reset itself to completely cover the next Flipchart page. This feature allows you to navigate through your Flipchart pages and ensure they are hidden behind the Revealer, even if your previous pages were partially revealed.

It is possible to use other Tools whilst using the Reveal Tool, for instance if you wanted to draw or add an image it is possible to do this while part of the screen is revealed. You would need to switch the lower Tool Tray back to Special Tools in order to carry on working with the reveal Tool or to cancel it.

To cancel the Revealer, click the Reveal Tool button in the Toolbox, and your screen will be fully exposed.

The Dice Tool

Use the Dice Tool to roll up to 5 dice for generating random numbers and incorporating games in numeric activities. Click the Dice Tool to show the dice Toolbar:

Choose the number of dice you want to use for the activity from the pop-up menu. You can choose up to 5 dice.

Click this button to roll the dice. You will see an animated sequence showing the die or dice rolling towards you. Click the roll dice button to roll the dice as many times as you wish. Go to the Tools settings to change the speed at which the dice roll, select **Teacher Tools Menu button > Menu > Preferences** and select **Tools** from the left hand pane.

Click the equals button to paste the total sum of the die or dice as a text object in the center of the page of the active Flipchart.

The sum behaves like any other text object. To move it, first ensure the Selection Tool is selected, then click the text object and move it to another location on the page. Move the text object of your sum before rolling the dice and clicking equals again, otherwise the new sum will be pasted on top of your previous sum.

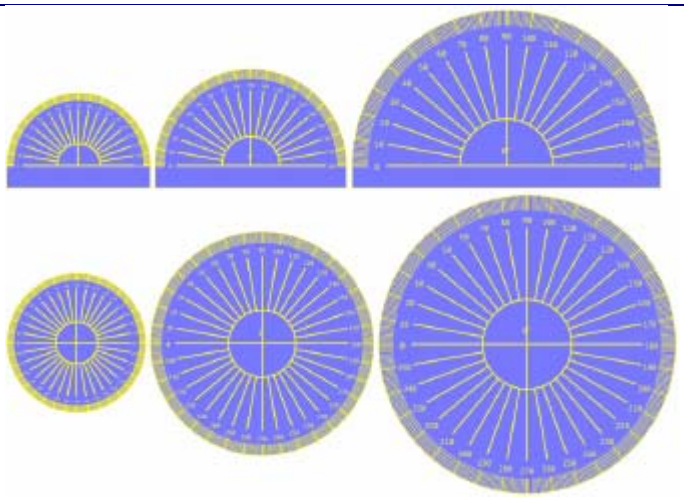
To close the dice Toolbar, click the **Close** button or click the Dice Tool to deselect it and switch it off.

The Protractor Tool

Click the Protractor Tool and you can then choose either a **180°** or **360°** Protractor, by clicking the appropriate icon. A virtual Protractor will be displayed, which you can resize, reposition, rotate and interact with using the pen and highlighter Tools.

Change the appearance of the Protractor

To change the scale of the Protractor, double-click the Protractor and click the **Increase** or **Decreaze** button in the Protractor Properties Palette. This scales the size of the Protractor to make it appear larger or smaller.

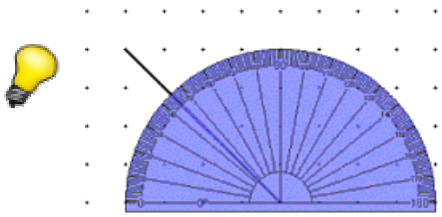


You can change the color and transparency values of the Protractor by clicking **Tool Menu > Preferences > Tools**.

Reposition the Protractor

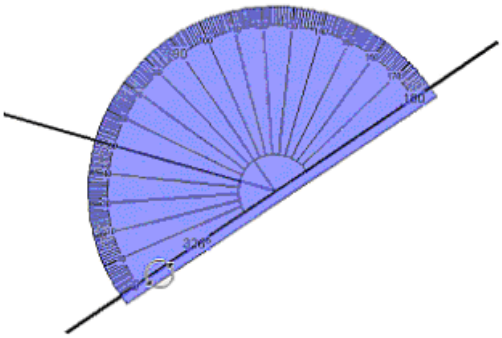
Position the ACTIVpen around the center sections of the Protractor. When the cursor changes to mover arrows, you can drag the Protractor to another position on the page.

Measure angles very accurately by using the Grid Tool to snap the Protractor and the object, which you are measuring, to a fixed point:



Rotate the Protractor

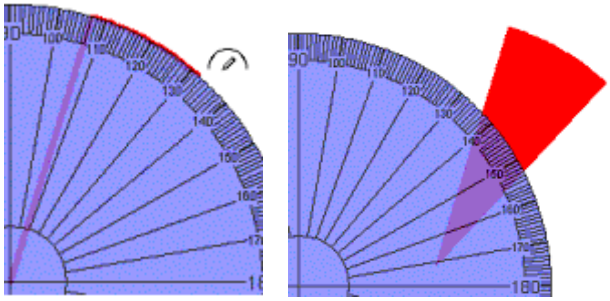
Position the ACTIVpen anywhere around the measurement scale towards the edge of the Protractor. When the cursor changes to rotator arrows, you can click and rotate the Protractor to a particular angle. This is required for when the angle you want to measure or mark out is from a line that is not horizontal. The center of rotation is at the center zero mark.



In Design Mode, you can choose to show the angle of rotation at the center point of the Protractor. By default is is shown. Control-click the Protractor, and choose **Show degrees** to turn this option off if you don't want the angle of rotation to be displayed.

Draw a Segment

When the pen or highlighter Tool is selected, move the cursor so that it is near the outside edge of the Protractor. The cursor will display an arc and pen. This indicates that you can draw a segment. Click the ACTIVpen on the edge of the Protractor, at the angle you want to start from. Notice that ACTIVprimary will automatically draw a line from the starting point to the center point. Drag the cursor along the outside edge of the Protractor until the segment is at the desired angle. ACTIVprimary will automatically draw a line from the finish point and will fill in the segment with the currently selected pen or highlighter color.



To draw an unfilled segment, in Design Mode Control-click the Protractor and choose **Fill Segments** to deselect this option. For any existing segments, in Design Mode double-click the filled segment and click the **Properties** button on the Object Properties Palette. Choose **Appearance** and click the **Fill Pattern** checkbox to clear the fill pattern.

Hide the Protractor

To remove the Protractor from the screen:

Click the Protractor Tool button once more.

Or,

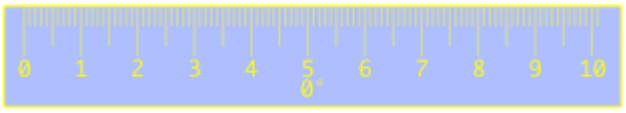
Double-click the Protractor to open the Edit Toolbox and click the **Delete** button.

The Ruler Tool

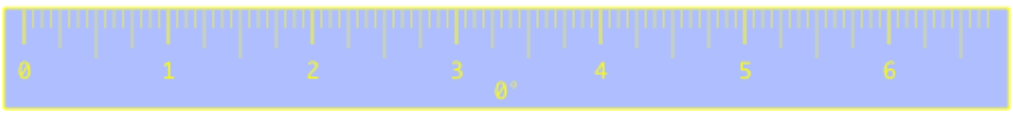
The Ruler is a useful Tool that can be used for various activities; such as arranging objects, drawing lines of a particular size and angle and measuring objects as you resize them.

Click the Ruler button and choose one of the following options:

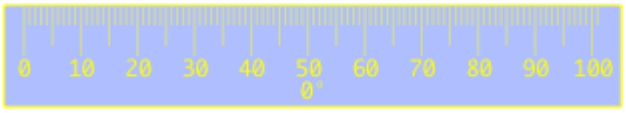
Ruler graduated in centimeters



Ruler graduated in inches



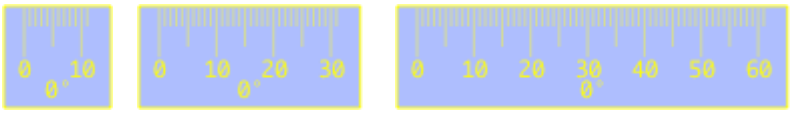
Ruler graduated in millimeters



A virtual Ruler will be displayed, which you can resize, reposition, rotate and interact with using the pen and highlighter Tools.

Change the appearance of the Ruler

To increase or decrease the length of the Ruler, double-click the Ruler and click the **Increase Ruler** or **Decrease Ruler** button in the Object Properties Palette.



When increasing or decreasing the size of the Ruler you are simply altering the length of the Ruler not its scale.

Double-click the Ruler to open the Edit Toolbox regardless of what Tool is currently active in the Main Toolbox.

You can change the color and transparency values of the Ruler by clicking **Tool Menu > Preferences > Tools**.

Reposition the Ruler

Position the ACTIVpen anywhere along the bottom edge of the Ruler. When the cursor changes to mover arrows, you can drag the Ruler to another position on the page.

Position the Ruler accurately by snapping the zero point to a grid point in a grid, which may or may not be visible on the page.

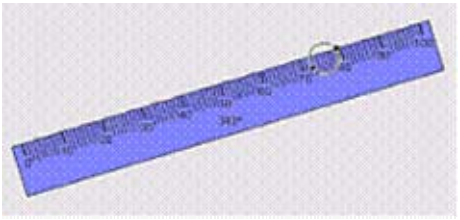
Rotate the Ruler

Position the ACTIVpen anywhere along the top edge of the Ruler. When the cursor changes to rotator arrows, you can click and rotate the Ruler to a particular angle. The center of rotation is at the top of the zero mark on the measurement scale. The current angle of rotation is displayed in the center of the Ruler.

In Design Mode, you can choose to show the angle of rotation at the center point of the Ruler. By default this is displayed. Control-click the Ruler, and choose **Show degrees** to turn this option off if you don't want the angle of rotation to be displayed.

Draw a straight line

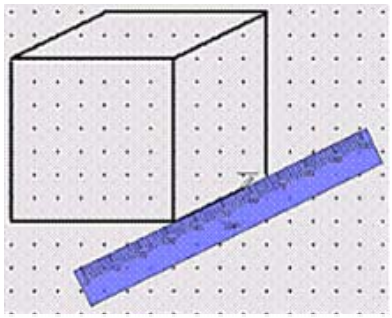
You can use the Ruler for measuring existing objects on screen or you can use the Ruler to draw out lines of a set size and at a set angle if required.



To draw using the Ruler select the **Pen Tool** then position the Ruler at the spot you wish to draw a straight line. As with the Protractor, you may rotate the Ruler around the 0 (zero) axis of the measurement scale.

To draw along the Ruler having previously selected the **Pen Tool** position your ACTIVpen just above the top edge of the Ruler until you notice the cursor change so that a line appears above the pen symbol. Now draw along the pen from your start point to the desired length.

Using the Grid Tool along with the Pen Tool will allow you to achieve a reasonable technical drawing.



Hide the Ruler

To remove the Ruler from the screen:

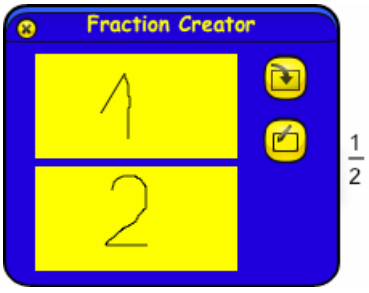
Click the Ruler Tool button once more.

Or,

Double-click the Ruler to open the Object Properties Palette and click the **Delete** button.

The Fraction Maker Tool

Click the Fraction Maker Tool then draw the two numbers that make up your required fraction. ACTIVprimary will use its handwriting recognition function to convert your handwritten input into a fraction.



After writing in your numbers click the **Add to Flipchart page** button to copy the fraction onto your page. The fraction will appear as an editable text object. You can click and drag this object to a new location if you are intending to add further fractions. If you want to clear the writing without adding it to the page to start over, click the **Clear** button.

To close the Fraction Maker window:

Click the Fraction Maker Tool button once more.

Or,

Click the **Close** button, located on the top right hand corner of the Fraction Maker window.

The recognition function takes the order of annotations into account when converting your writing.

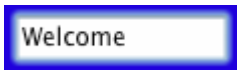
A fraction is actually made up of two separate text objects and a horizontal line, which are grouped together. It is possible to edit this group of objects in Design Mode. However, editing a grouped object is quite labour intensive and it may be quicker to delete an incorrect fraction and create a new one.

Handwriting Recognition

This Tool allows you to convert your handwritten annotations into editable text objects. Clicking this button will open the Handwriting window:

Note that you have full access to the text Tray to set the font, size, color, and so forth which will be applied to the recognized text.

Use your ACTIVpen to write your words in the input area. Click the **Preview** button and ACTIVprimary will convert your handwriting. The output will be displayed in the text box below the input area.



If you are happy with the result of the recognition click the **Apply** button. ACTIVprimary will paste the resultant text object onto the current Flipchart page. The window will remain open for further input.

Closing the Handwriting Recognition window

When you are finished, click the close button in the top right-hand corner of the window. You will see your text object(s) on the Flipchart page.

Editing Result

If you are not happy with the recognized text, click the **Redo** button to clear the result and then try again. Remember that the recognizer creates editable text objects, so it may be quicker to edit the resultant text object rather than attempting recognition numerous times if the recognizer fails on certain words or characters.

An alternative to using the Redo button is to edit the recognized text before applying it to the page:

When you have clicked the **Preview** button in addition to the recognized text being displayed you may have noticed a new Tool appear. This is the **Keyboard Tool**, which can be used to edit the recognized text.

Click the **Apply** button directly without previewing the result.

Adjustable Guide Lines

To aid handwriting we provide adjustable guide lines.

Use the **increase guide line distance** button to widen the lines. Repeated clicks will increment the distance gradually.

Use the **decrease guide line distance** button to narrow the lines. Use repeated clicks to adjust the distance incrementally.

Use cursive writing, not separate letters to improve the result. If you find that certain letters are not recognized then attempt to modify your stroke slightly to see if this helps.

The Recognition function takes the order of annotations into account when converting your annotations.

If you are confident that your handwriting will be correctly recognized, you can bypass the Recognize button and click the Apply button to add a text object to the page.

Language Support

System Inkwell Handwriting Recognition engine now has support for the following languages:

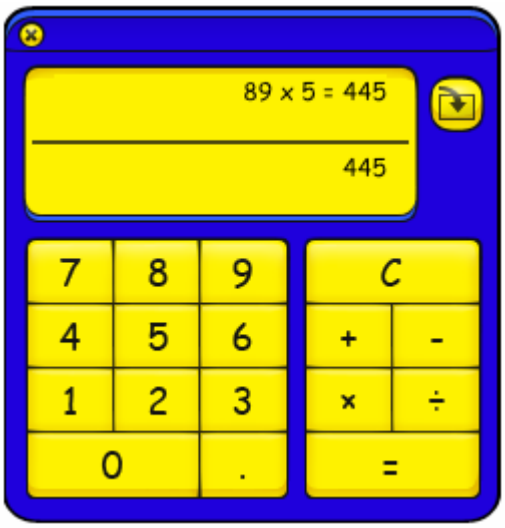
- English (US)
- French
- German

In order to use this feature you must switch the Recognition engine into the appropriate language mode. Click the **Teacher Tools Menu button > Menu > Preferences > User Input**. The User Input preferences will be opened. In the Handwriting Recognition language section, choose a different language. For this click **Show Ink Preferences...** button that will open for you Ink prefpane in the System Preferences, where from the **Language:** pop-up menu you can change to your prefered Handrwriting Recognition language, or **Cancel** to reject your change and close the Preferences window.

The Calculator Tool

Selecting the Calculator Tool will display a Calculator in a floating window. This version works just like a handheld device.

When you select the Calculator, the child version will automatically appear as default. However, you can change the Calculator to an adult version. Control-click anywhere on the Calculator apart from the display screen and choose **Adult Calculator** from the contextual menu.



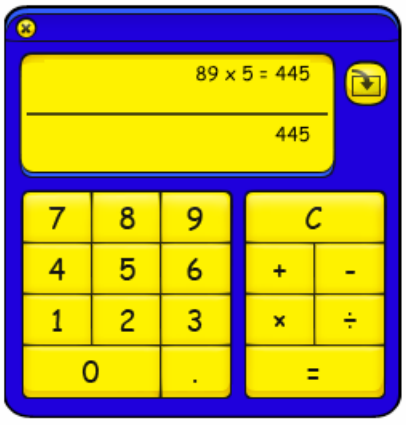
Reposition the Calculator

If you want to move the Calculator to a different position on the page, click anywhere on the Calculator except on the screen or buttons and drag it across the page. Release the click when you are happy with the position of the Calculator.

Paste calculation to page

To insert the calculation as a text object onto the current Flipchart page:

- Child version- Click the **Output to Document** button.
- Adult version- Control-click and choose **Output to Flipchart page** from the contextual menu.



89 x 5 = 445

Close the Calculator

To close the Calculator:

Click the Calculator Tool button in the Special Tools Tray.

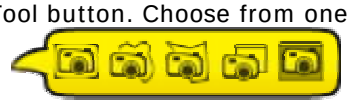
Or,

Click the **Close** or button on the Calculator.

The Camera Tool

The Camera Tool allows you to take a photograph of the content of your Flipchart pages. The photograph will capture all types of objects that are displayed on screen including backgrounds, annotations, grids, lines, shapes, text and other images. The resultant photograph is an image of all of these objects, which can be added to your Flipchart page, resource library or copied to the Clipboard as an object that you can manipulate. The photograph is simply an image of the screen, so any objects within your photograph will not be editable. You can resize or rotate the photograph like any other image object.

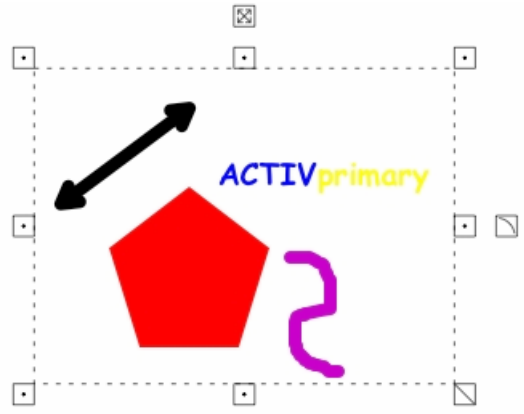
Make sure that the screen is displaying the image you wish to capture, then click the Camera Tool button. Choose from one of the following Camera types from the **Camera Toolbox:**



If using the Camera from the Desktop Toolbox, first click the Camera Selector button to select the Camera type.

Rectangular Area Capture

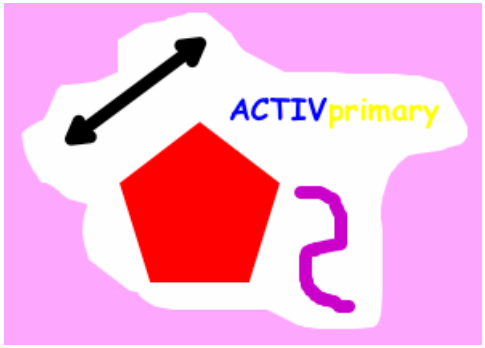
A dotted line in a rectangle shape will appear on your screen. The rectangle can be positioned anywhere on your screen by a click inside the rectangle shape and drag it to another part of the screen. It can also be resized using the handles that surround the border. Move these around until the shape contains the image you want to photograph, then choose from one of the **Paste Options** available from the Camera Toolbox.



Point to Point Area Capture

Allows you to capture an irregular shape made up from straight lines. The first click starts the shape. Every time you c, you add another node to the shape so you can move the line in another direction. To end the shape, click close to the first point and ACTIVprimary will automatically close the shape for you. A preview of your photograph will appear on screen surrounded by a pink background. Choose from one of the **Paste Options** available from the Photograph Toolbox.

Freehand Capture



Allows you to capture an irregular shape using freehand lines. Click and drag the cursor to start the capture. As you move the cursor, a dotted line follows it to define the capture area. To end the shape, just release the click and ACTIVprimary will close the shape by placing a straight line between the first and last point. A preview of your photograph will appear on screen surrounded by a pink background. Choose from one of the **Paste Options** available from the Photograph Toolbox.

Window Capture

Capture open windows of other applications. To select a window to capture point the appeared camera cursor to the window and it will get highlighted.

Fullscreen Capture

Make a fullscreen screenshot of your desktop and launched applications windows.

Paste Options

Once you have decided on the position and size of the photograph, you need to decide where to locate the image. Choose one of the following options from the Photograph Toolbox:

Pastes the image on the Flipchart page you currently have open.

Pastes the image on a new page in the Flipchart you currently have open.

Save the image to the Resource Library. You will be prompted for a filename. In the **Save Photo** dialog you can choose to save either to **Your** or **Shared Resource Library**. The Images folder in your Shared Resource Library will be selected by default, but you can choose to save the image to other location by selecting appropriate location buttons.

Pastes the image in the Clipboard. From here, if you switch to **Design Mode**, you can paste it onto a Flipchart page by Control-clicking a Flipchart page and choosing **Paste Image from Clipboard** from the contextual menu. Or, you can paste the captured image into one of your applications by navigating to paste whilst the application is active.

Click the **Close** button to abandon the operation.

The XY Origin Tool

Rotate objects

You can rotate any object just by selecting it and using the Rotate handle to spin the object around to a preferred angle. However, you may not want to rotate an object around its center point. Instead, use the XY Origin Tool to add a rotate point anywhere on a page. The object will spin around the page origin point when you click and move the rotate handle.

Ensure the object you want to rotate is located on your page, then click the XY Origin Tool to show the **origin point** . Move the origin point to a new position, this will be the position that you want to be the center of rotation. Select the object with the Selection Tool, notice the XY Origin Tool button remains selected. Then, drag the Rotate handle to spin the object around the new origin point. When you have finished, click the Rotate Tool once more to remove the rotation point.

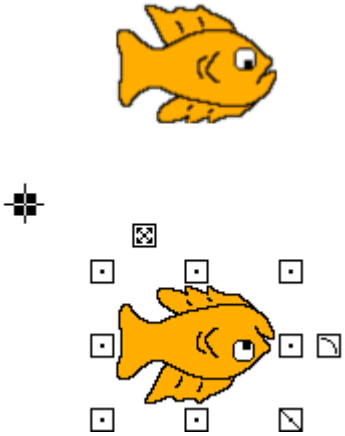
The rotation point will remember its last position on a page. When you switch it on again, it will automatically appear in the same position when it was last displayed.

Groups of objects will rotate about the center point of the selected group, unless the XY Origin Tool is switched on. In this case the group will rotate around the XY origin point.

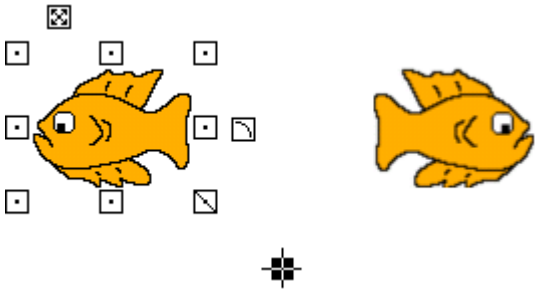
Mirror or flip objects

Behaves like the XY origin of a graph or a grid (that is the zero-zero point).

Use the XY Origin Tool to offset the object from a specified origin point. Example:



Mirrored in X axis about the origin point



Mirrored in Y axis about the origin point

The Clock Tool

Click the Clock Tool on the Toolbox, then choose one of the following options from the pop-up menu:

Displays a traditional analog Clock with a circular face and hands.

Displays a digital Clock.

Displays a traditional analog Clock with the digital Clock underneath.

Displays a digital counter. The counter will count down from the time entered in the Clock counter window.

Displays a digital counter. The counter will count up to the time entered in the Clock counter window.

Analog and Digital Clocks

The Clock opens in a separate window, which will always be on top of other applications. To change the size of the window, hover the cursor over one of the window edges until a resize arrow appears . Use the resize arrow to click and drag the window to the size you prefer. To change the position of the window, click any blue part of the window and drag it to the position you prefer. ACTIVprimary will remember the size and position of the Clock for the next time you open the Clock.

The clocks have settings related to them that allow you to change the way they display or how they behave. To view the settings, click **Teacher Tools Menu button > Menu > Preferences > Clock**.

To close the Clock window, click the **close** button.

Counters

When you select one of the counters from the menu a window which allows you to define your counter and change the way it behaves appears on screen.

Counter window

Count down from / Count up to

Use the up and down arrows to increase or decrease the amount of counting time. This is measured in hours, minutes and seconds. The image below shows the counter set as 1 minute 30 seconds.

The Count Down Clock will first display 1 minute 30 seconds and will count down to zero. The Count Up Clock will first display zero and will count up to 1 minute 30 seconds.

Reset

Click the reset button to set the counter to zero.

Repeat

Select this option to repeat the count when the counter has reached its target. This will be zero for the Count Down Clock, or the time you specified for the Count Up Clock.

After timeout play following sound

Click the down arrow to show any sound files located in the sounds folder in your ACTIVprimary application directory. You can add other sound files to this directory so they appear in the list, using Finder.

After timeout, perform following action

Click the down arrow to show a list of some useful actions you may want to occur when the counter has reached timeout.

When you are happy with your definition click **OK** to display the counter, or click **Cancel** to remove your changes and close the window. The counter will start counting automatically when it appears on screen. The pause button is a toggle switch, which allows you to temporarily stop and restart the counter. To open the Clock Counter dialog and change the definition of your counter, click the menu button and select one of the counters from the menu. If you no longer need to use the counter and would prefer to view a Clock instead, choose one of the clocks from the menu instead.

Pause / Go button

Click the **Pause** button to temporarily stop the Clock or counter. To restart the Clock or counter, click the button once more, which has now become a **Go** button.

Desktop Mode

Desktop Mode allows you to hide the Flipchart and Tools in order to show the live desktop. When you click the Desktop Mode button, in addition to displaying the desktop you will also see a small floating Toolbar. This is the Desktop Toolbox.

The Selection Tool is active by default so that you can interact with your desktop.

Minimize the Desktop Toolbox

If the Desktop Toolbox takes up too much space on screen, use the roll-up button to minimize it and hide the tools from view. The roll-up button will then become a roll-down button. The only other button displayed on the minimized Toolbox is the button that allows you to enter the ACTIVprimary User Interface. Click the roll-down button and the Toolbox will show the hidden Tools.

Exit Desktop Mode

Once you are finished you can return to the main ACTIVprimary interface by clicking the **Return to ACTIVprimary** button.

Annotate over the Desktop

Use the ACTIVpen to draw or highlight over any open application using the Pen and Highlighter Tools.

Select the Pen or Highlighter from the Desktop Toolbox to activate the annotation mode specified in **General** pane of **ACTIVprimary2 Preferences.**

Click a color and line thickness from the selectors. They will be highlighted in red to indicate which selectors you have chosen.

Example

This example shows the blue color and the 3rd thickest line selected for the Pen Tool.

You are now ready to start drawing or writing with your ACTIVpen.

You can move your Pen and Highlighter annotations around the screen using the **Select Tool** . Click the Select Tool and move your cursor over to the annotation. When the cursor displays the mover arrows, drag the annotation to a different position.

If you are annotating in Transparent Window Mode and you choose the Select Tool, you will be able to interact with the underlying applications or your Mac OS Desktop with your annotations still visible.

To delete all annotations on the screen, click the **Clear Screen Tool** . If you are annotating in Mac OS Desktop Screenshot Mode when you click the Clear Screen Tool, the Select Tool will automatically be activated and you will be able to use the underlying applications.

If you make a mistake and need to undo your last action, click the **Undo Tool** . You can redo the action by clicking the **Redo Tool** button. These Tools function in the same way as though you are working on a Flipchart.

Capture your annotations by using the Camera Tool to take a photo of them.

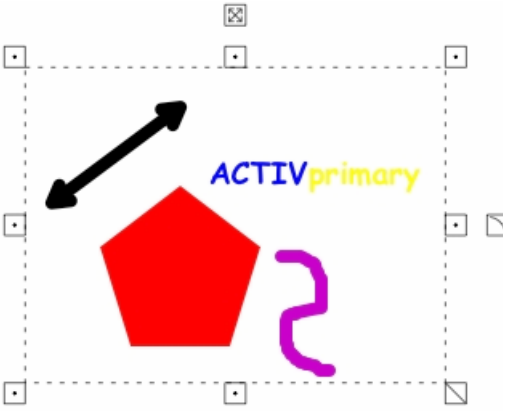
Capture photographs of your Desktop

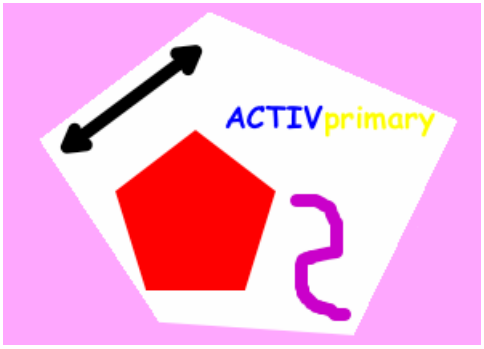
Make sure that the screen is displaying the image you wish to capture, then click the **Camera Selector button** and select a camera type. Choose from one of the following Camera types from the **Camera Toolbox** :

For more information about how to use each camera type, refer to the section about The Camera Tool.

Rectangular Area Capture

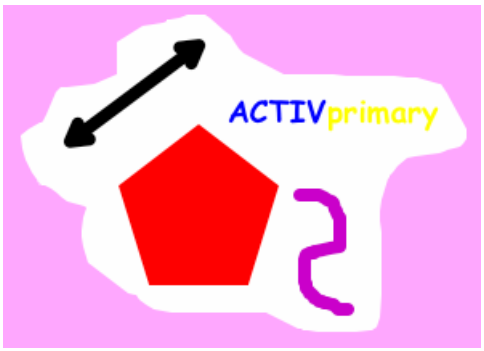
Resizable rectangle shape that can be re-positioned on the desktop.





Point to Point Area Capture

Draw straight lines in order to capture an irregular area of the screen.



Freehand Capture

Draw freehand in order to capture an irregular area of the screen.

Window Capture

Capture open windows of other applications. To select a window to capture point the appeared camera cursor to the window and it will get highlighted.

Fullscreen Capture

Make a fullscreen screenshot of your desktop and windows of launched applications.

Paste Options

Once you have decided on the position and size of the photograph, you need to decide where to locate the image. Choose one of the following options from the Photograph Toolbox:

Paste the image on the Flipchart page you currently have open.

Paste the image on a new page in the Flipchart you currently have open.

Save the image to the Resource Library. In the save dialog you can choose to save either to **Your** or **Shared Resource Library** or **Other Location...**.

Copy the image to the Clipboard.

For more information about each of these options, refer to **The Camera Tool**.

Use the Revealer or Spotlight over your Desktop

If you are annotating in Transparent Window Mode, your annotations will be temporarily hidden when the Spotlight or Revealer are active.

Spotlight

Use the Spotlight to focus attention on a particular part of the screen.

To resize the Spotlight, press the ACTIVpen down and drag the cursor towards the center of the Spotlight area to make it smaller, or away from the Spotlight center to make it larger.

To hide the Spotlight, click the Spotlight Tool button once more.

Revealer

Use the Revealer to hide the contents of your screen. You can reveal in one of four directions from the top, bottom, left or from the right.

Use the ACTIVpen to move the cursor to one of the quadrants, then drag the black area to the opposite quadrant, gradually revealing the screen. When you have finished, slide the black area back to where you started so that it again covers the whole of the windows screen, or click the Reveal Tool button to remove the Revealer.

To hide the Revealer and fully expose your screen, click the Reveal Tool button once more.

Design Mode

Design Mode allows you to work with objects on your Flipchart page, so that they appear or behave in a certain way when you switch to Present Mode. This makes it easier to prepare your Flipchart because in Design Mode you have the control to edit freely; you can set various object properties and Control-click the page to use useful editing functions. In Present Mode, these object properties are applied, so an object will behave as intended. For example, if you apply an action to a Flipchart object, you can interact with it when you switch to Present Mode.

Menu Button

The appearance of the Teacher Tools Menu button indicates which mode is currently selected:

Design Mode

Present Mode

When you open ACTIVprimary for the first time, the Present Mode is selected.

Switching between the Design and Present Mode

Switch to Design Mode to author your Flipchart, then go back to Present Mode to view and interact with your Flipchart. You can switch between each mode at any time by turning the Design Mode on and off using the Teacher Tools Menu.

To turn the Design Mode on: click the **Menu** button, then click the **Design Mode** button. Notice that the appearance of the Menu button changes to the outlined gear inside broken lined square as indicated on the picture above.

You need to turn off the Design Mode to return to the Present Mode. To do so, click the **Menu button > Design Mode**. The appearance the Menu button changes back to solid black gear.

About the Properties window

The Properties button allows you to change and apply a range of powerful properties to your Flipchart page or object(s). The windows are intuitive so the options available will depend upon whether you have selected the properties for a page, single object or multiple objects. Also, the type of object(s) selected will determine which properties are displayed.

Page properties

Apply properties to a particular page in your Flipchart so that it displays in a particular way when you turn to that page.

Object properties and actions

Apply the object properties to change how an object is displayed, identified, arranged and how it behaves. You can also apply an action to an object. When you click an object, something will happen to it or to an object that you specify. This helps you to promote an active learning environment.

Identification Properties

The Identification tab allows you to define a single object with a name, or a group of objects with a group number.

Name

The Name text entry field will only be displayed when you have selected a single object. Every object added to the Flipchart page is automatically given a default name to differentiate one object from another. This allows you to identify it, for example, in a search or so you can select the object to apply an action to it. ACTIVprimary allows you to change the default name given to an object. Click inside the text entry field and delete the default name before entering a suitable name for the object.

A name can only be applied to single objects.

Grouped

The Grouped option will only be available when you have selected multiple objects. If you select the Grouped option, ACTIVprimary will automatically assign a group number to all objects selected and the group will be treated as one object. You can then apply specific properties to the group.

When the objects are grouped, they will remain on the default layer for that object type. To change the layer which the group resides on, in Design Mode Control-click the group with the Selection Tool and choose **Bottom Layer**, **Middle Layer**, or **Top Layer** from the contextual menu. Or, go to the **Appearance properties**, and choose a layer from the pop-up menu.

Groups that contain a mixture of different object types can only be added to the Collections folder in the **Resource Library**.

Ungroup the objects by deselecting the option. If you ungroup the objects, they will revert to their original properties.

Try this example:

Add two or three objects to your page. Click one of the objects and use the Rotate handle to rotate it. Only the object that you have selected will be rotated. Now select all of your objects, double-click and click the Properties button on the Edit Toolbox, then click the Identification tab and select the Grouped option. When you click one of the objects, the selection area will now include all the objects you selected. Drag the Rotate handle to rotate the objects. This time, the objects are rotated around the center point of the object selection.

Position Properties

The Position tab allows you to define the arrangement of objects on the Flipchart page accurately, or change the size of a page in your Flipchart.

Left, Top, Width, Height

Type a number (measured in pixels) in the relevant text entry field and click **<Enter>** to move the object to that position:

Left
Repositions the left edge of an object from the left edge of the Flipchart page.

Top
Repositions the top edge of an object from the top edge of the Flipchart page.

Width
Stretches the object horizontally from its 'Left' position.

Height
Stretches the object vertically from its 'Top' position.

The position and size properties cannot be applied to change the position or size of a group of objects. If you alter the position and size properties for a group of objects, each object within the group will move or resize itself individually. As such, the properties will not indicate the position and size of the group.

Angle

Rotates an object from its top left point. Enter a number (measured in degrees) in the textbox and click **<Enter>** to rotate the object to that position.

If you set an angle for a group of objects, each object will rotate around its own top left point, instead of the top left point of the group.

Appearance Properties

Page Color

Click the color selector and select a new background color for your page from the color palette.

Tile fit

Allows you to select how a background image is displayed on the page. Click the drop down arrow and choose a tile option from the list. The default setting is to tile the image if it does not fill the page.

Layer

Each object will automatically be placed on a default layer; top, middle or bottom. To move an object to a different layer, click the down arrow and select a layer from the drop down list. To learn more about working with layers. See the section about **Layers** for more information.

Transparent

Select the option to make the selected object transparent. The default transparency color is grey. To change the transparency color, click the color button and use the Object Transparency Selection Tool to choose a color from the image.

Select the **Pick through** option and click the Color block to select a color to make it transparent.

Transparency

Move the slider to change the transparency of an object and make it appear opaque or faded.

Visible

Select the option to make an object visible (default).

Invisible objects on your page will be displayed when in Design Mode, but not when you change to Present Mode.

Reflected

Select the option to mirror the selected object horizontally.

Inverted

Select the option to mirror the selected object vertically.

Pen Type

Click the down arrow and select a different pen type from the drop down list; pen, highlight or Eraser.

Pen width and Color

Enter a number to change the pen width (in pixels). The maximum value you can set is 999.

Setting the pen width to 0 is a special setting that keeps the width of an annotation at 1 pixel regardless of the zoom level on the page.

To change the color of the pen, click the color block and select a color from the color palette.

Line style

Click the drop down arrow to choose between a flat line, which contains sharp corners, or rounded line, which contains rounded corners.

Begin style / End style

Click the drop down arrow and choose from the following options:

Plain	Select Plain to view your line without any end shapes.
Arrow	Select Arrow if you want your line to contain a pointed arrowhead at one of both ends.
Bullet	Select Bullet if you want your line to contain a rounded shape at one of both ends.

Outline

Select the option to apply an outline and change the outline characteristics.

Type a number in the Outline width text entry field to change the width (thickness) of the outline (in pixels). The default outline width is 1 pixel.

Click the Color button and select a color for the outline from the color palette. The default color is black.

Fill Pattern

Select the **Fill Pattern** option to apply a pattern style that will fill a shape or text area. When applied, the fill pattern will sit on top of the background property, see below. If applied to a text object, the fill pattern will sit underneath the text. Click the drop down arrow and choose one of the pattern styles.

To select a color, click the **Color button and select a color from the color palette.**

To change the fill pattern, choose the pattern you want from the Style pop-up menu.

Background

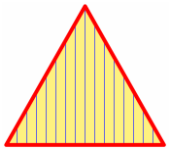
Select the **Background** option to apply a background color to shapes and text objects. This property is automatically applied to text objects which have a colored background. To change the color, click the color block and select a different color from the palette.

Example

To illustrate the use of outlines, fill patterns and backgrounds:

This shape object consists of:	This text object consists of:

Red Outline	Green Outline
Blue vertical fill pattern	Blue grid fill pattern
Yellow background	Yellow background



Reset Colors

Reverts any color changes to an image object or background image to their original colors.

Try this:

Use the Fill Tool to change the colors of an image and save it to the Resource Library.

Select another page in your Flipchart and drag the changed image out from the Resource Library.

Use the Fill Tool to change the color of the image again.

Now click the Reset Colors button.

Notice that the colors of the image will revert back to the original colors, i.e. the same colors as before it was added to the Resource Library.

Remove Background

Deletes any background images from the page.

Container Properties

The Container tab allows you to create activities where objects can be enclosed within other objects.

Can contain

Choose one of the following options from the pop-up menu:

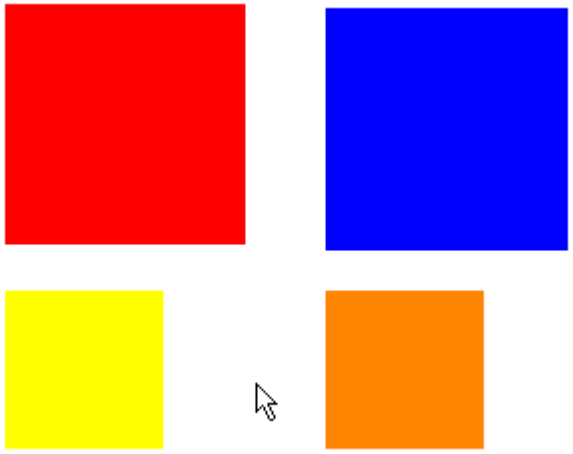
Nothing

The selected object will not 'hold' any other objects placed inside it. When the selected object is moved, any objects placed within it will remain in the location in which you placed them.

Anything

The selected object will 'hold' any objects that are placed inside it. When the selected object is moved, any objects placed inside it will move with it.

Example



In this example, the red square is not set to contain other objects. When the yellow square is placed inside the red square, the yellow square stays in the same position when the red square is moved.

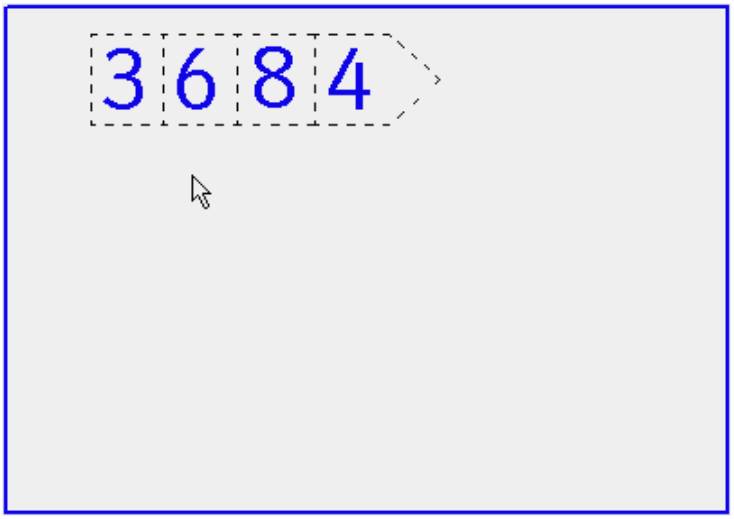
The blue square is set to contain other objects. So, when the orange square is placed inside the blue square, and the blue square is moved, the orange square moves with it.

Contain Rules:

- Any type of object, except annotations, can be a container.
- The object being contained must have a higher stacking order than the container. That is, it must be in front of the container.
- The object being contained must fit within the container pickup area.
- An object can be contained even when it is containing another object.

These rules are demonstrated by this more **complex example**:

Here is a more advanced way of using the Container feature:



There are four individual images here:

Number 3000 image

Number 600 image

Number 80 image

Number 4 image

All of the images except the Number 4 image have had the container property applied to them, so that they will contain any object placed on top of them. In addition the stacking order of the images is such that they sit on top of one another correctly. There is also a hidden snap to grid, which forces the objects to line up correctly. You may notice a sudden snap action after each of the moves in the animation as the object is snapped to the underlying grid.

In the example, all four objects appear as one. You can see that when the number 3000 is moved, the other numbers move with it. When the number 600 is moved from the number 3000, the lower numbers move with it because they are contained by it. The number 80 is then moved away from the number 600, notice the lower number goes with it. Finally the number 4 is moved away from the number 80.

The animation continues, showing various combinations of placing the number objects onto various other number objects, showing how these are contained by moving the container object. The sequence finishes by all objects being dragged away from each other.

The number example above shows a valuable way of using this property in the classroom. Careful consideration and preparation is required so that the objects you are going to use are placed on the page in a logical order or that you later define the stacking order by using the **To Front** or **To Back** actions, which are available from the contextual menu in Design Mode.

Actions

The Actions tab allows you to perform an action when you click a selected object(s), enabling you to create some very special effects in your presentation. Actions can be applied to image, line, shape or text objects.

Actions are set up in Design mode and only work in Present Mode.

Click the drop down arrow and select an action from the list:

Do nothing	This is the default option. Clicking an object will not trigger an action to occur because an action has not been selected.
First Page, Last Page, Next Page, Previous Page	These are primarily for navigation purposes. Clicking an object will make the Flipchart jump to the relevant page.
Another Page	Choosing this option will allow you to jump to any page in your Flipchart when you click the object. A Set button will automatically appear when you choose the Another Page option. Click the Set button and a popup window will appear which lists all the pages in your Flipchart. Hover the cursor over a page number in the list. A thumbnail preview of the page will be displayed in the blue area above the list. Click a page number to select it as the page your Flipchart will jump to. The window will close automatically. Click the close button to close the window without choosing a page.

Play sound	A sound will play when you click the object. Choosing this option will allow you to select a sound file from the Shared Sounds folder in the Resource Library. However, you can change this location and browse other folders on your computer. When you have selected a sound file, click Open and the filename will be displayed. **Any links to sound files will be embedded with the Flipchart.**
Open embedded document or file	Allows you to open a file when you click the object. When you choose this option, a Set button will automatically appear. Click the Set button and a popup window will appear which allows you to **create a link** to a file.
Show page notes	Selecting this option will open the **Page Notes** for the current Flipchart page when you click the object.

Remove an action

To remove an action, double-click an object, click the Properties button on the **Object Properties Palette**, click the Actions tab, and choose **Do nothing**.

Show Action Objects

The **Show Action Objects** setting allows you to easily identify which objects on the flipchart page cause an action to occur when you click them. This is especially useful if:

- You are unfamiliar with the contents of a flipchart, for example if someone else has authored the flipchart.
- If the action objects are invisible.
- If you are opening a flipchart that was authored in a previous version of ACTIVstudio or ACTIVprimary, which contains actions that are supported in ACTIVprimary2.

By default the setting is switched off. To switch this setting on, go into **Design Mode** and Control-click a flipchart page, then choose **Show Action Objects** from the contextual menu.

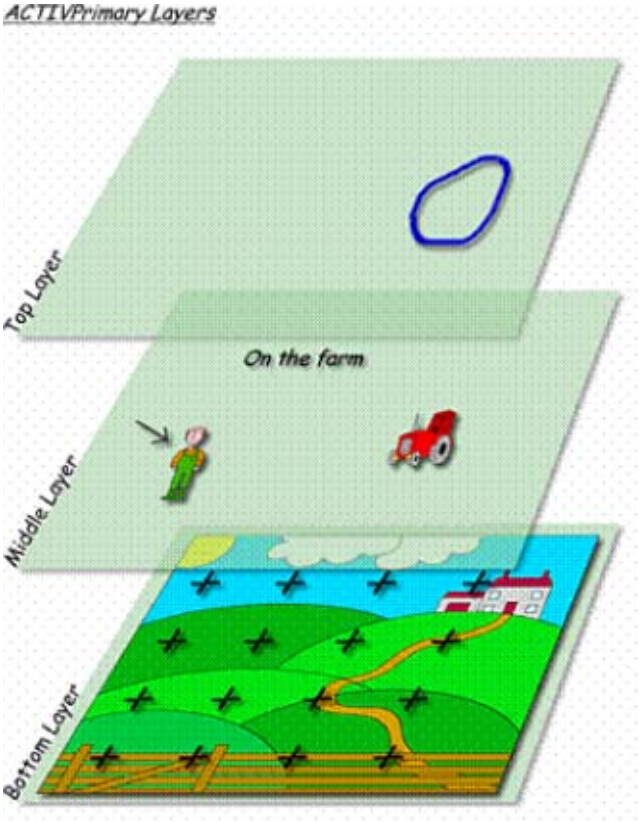
All action objects in your flipchart will be surrounded by a red rectangle, helping you to identify them.

About ACTIVstudio version 1.x hyperlinks

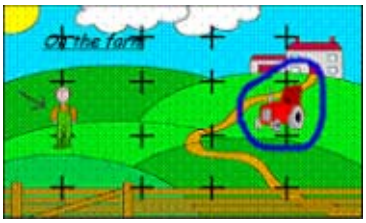
Hyperlinks will function according to their original setting in the ACTIVstudio 1.x Flipchart. Types supported are page hyperlink, file hyperlink, embedded file hyperlink. Hyperlinks to the ACTIVstudio 1.x link library are not supported and will be ignored.

Layers

ACTIVprimary uses layers to hold the various objects that make up the Flipchart page. These are like transparent sheets which only contain certain object types unless you move objects from one layer to another. All objects placed on the page, are ordered according to the layer and stacking order.



Take the image to the left, This shows each of the three layers separated in a pictorial view to demonstrate how layers work. The bottom layer holds the Farm background image and is also displaying a grid. The Middle layer contains some images, arrows and some text objects. The top layer has a simple pen object which is circling the Tractor. Here is the view you would see normally:



Top layer

Contains all annotations (Pen, Highlighter and Eraser) objects. These objects will display on top of any other object placed on the two layers below.

Middle layer

Contains Image, Line, Shape and Text objects.

These objects will be displayed below (or underneath) any object placed on the Front layer but will be displayed above (or over) the top of any object placed on the Back layer.

Choosing Clear Objects from the Wipe Clean Menu will remove any objects placed on the middle layer, see **Changing the layer** below.

Bottom layer

The bottom layer contains any object that is physically placed on it. A background image, grid or any object that has been locked to the background will reside on this layer.

Choosing Clear Objects from the Wipe Clean Menu will remove any objects placed on the back layer, see **Changing the layer** below.

The layers are completely separate from each other. In other words, you can replace the background without affecting your images or annotations. Or you can annotate over your photographs and background without affecting other layers.

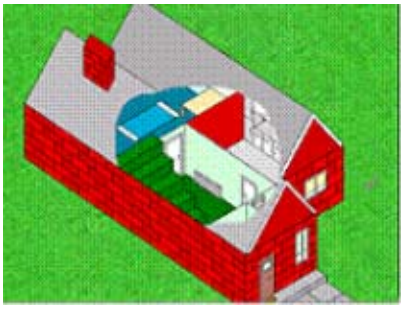
Changing the layer

To change the layer an object is located on, in Design Mode, Control-click the object and choose **Bottom Layer**, **Middle Layer**, or **Top Layer** from the contextual menu. This allows you to cover, for example, an annotation object with an image object.

The Eraser Tool will act on any object placed on the front layer, as well as annotation objects.

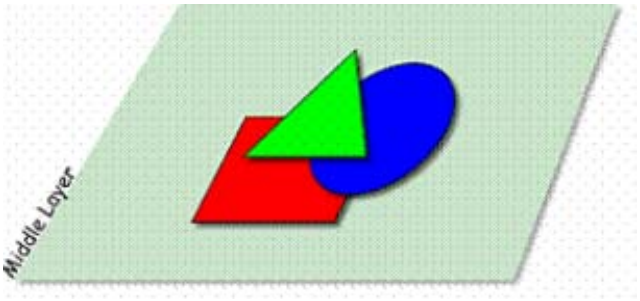
Example

An example of how this may be used is provided in the resource library, where you have two images of a house, one a cutaway view inside the house the other a full external view, These objects have already been placed into the Resource Library with the property set so that the external view is placed on the Top layer. Drag and position both images so that they sit one on top of the other on the page then when ready use the Eraser Tool to selectively erase the front house image away to reveal the inner layout.



Object Stacking Order

All objects when added to a page are allocated a position in the stacking order according to the order they are added to the page. Each successive object is placed on top of the preceding one within its own layer. Think of it as a pack of playing cards where you must take a card out of the pack and place it on top in order to fully view it.



The images on this example page have been added in the following order:

Red Square

Blue Circle

Green Triangle

So, the following rules will apply:

The red square will display beneath the blue circle and green triangle.

The blue circle will display on top of the red square but will be below the green triangle.

The green triangle will display on top of the red square and blue circle.

These rules apply in each layer, so not only is there a stacking order in terms of the layers, you also need to consider the stacking order within each layer.

Changing the stacking order

You can alter the stacking order by sending an object to the front or back of the stack. In Design Mode, Control-click the object and then choose **To Front** or **To Back** from the contextual menu. You can also select multiple objects to send the selection to the front or back. Each object will retain its stacking position in relation to the other objects.

A setting within ACTIVprimary allows you to alter the stacking order of objects within their respective layers just by clicking an object. Click **Teacher Tools Menu button > Menu > Settings > Flipchart Objects** and select the **Objects to Front** option.

Now whenever you click any object it will automatically be brought to the front of all other objects within its layer. You can also use this function with multiple objects; once again the objects will retain their relative stacking order to each other. If you have selected a range of objects that span across different layers then the objects will each have their stacking order altered in relation to the layer they reside in.

Can I prevent an object from being selected and moved?

It is possible to lock an object to prevent it being repositioned, resized or rotated when you are in Present Mode. You can, however, still apply other properties or actions to the object. When the object is locked the selection handles will not appear when you click the object. This is really useful if you have a lot of objects on your page and some of which you may want your pupils to move and others you may want to stay put.

In Design Mode, Control-click any object and then choose **Lock** from the contextual menu. Once an object has been locked, you may remove this property by Control-clicking the object that has been locked and choosing **Unlock** from the contextual menu.

Page Organizer

Use the Page Organizer to manipulate the pages for your Flipcharts. You can move, duplicate, add or delete pages using the Page Organizer and its Toolbox.

To access the Page Organizer you need to be in Design Mode. Click the page number button to view the Page Selector Tray, then on the **Page Organizer** button located in the Tray.

The Flipchart window will update to show a thumbnail of all your Flipchart pages and the Page Organizer Toolbox.

Organize your pages

Use your ACTIVpen to drag thumbnails to reorder the pages in the Flipchart.

Selecting a single page

Click a page to select it, a red rectangle around the page shows which page you have selected. Drag the page to another location, as indicated by the red cursor.

Selecting multiple pages

Adjacent pages

Click the ACTIVpen to the left of a page, then drag over the adjacent pages to select them, and drag to a different location.

Or

Select the first page in the selection you want to move then press the Shift key before selecting the last page. All pages in between the pages will be selected.

Example

Drag the pages to another location.

Non-adjacent pages

Press the Command key whilst you click the ACTIVpen on a selection of pages.

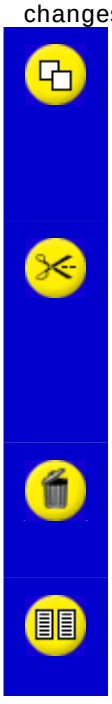
Example

Drag the pages to another location.

Page Organizer Toolbox

Use the Page Organizer Toolbox, to manipulate your pages with the cut, copy, paste, delete and duplicate functions.

When you have finished manipulating your pages, click the **Return to Page View** button located in the page number position. Your Flipchart will be updated with the changes you made in the Page Organizer.



Copy

Copies the selected page(s) to the ACTIVprimary Clipboard. The page(s) will then be available to paste in another location in the same or another Flipchart. Only the most recent copied page(s) can be pasted.

First select the thumbnail(s) before you click the Copy button.

Cut

Removes the selected page(s) from the Flipchart and places the page(s) on the ACTIVprimary Clipboard. The page(s) will then be available to paste in another location in the same or another Flipchart. Only the most recent cut page(s) can be pasted.

First select the thumbnail(s) before you click the Cut button.

Delete

Click the Flipchart Bin to remove the selected page from the Flipchart.

First select the thumbnail(s) before you click the Delete button.

Duplicate

Copies and pastes a copy of the selected page(s) after the last page in the current Flipchart.

First select the thumbnail(s) before you click the Duplicate button.

Paste

Inserts the most recent cut or copied page(s), into the Flipchart.

To the same Flipchart, select Paste to add the selected page(s) either:

- immediately before any currently selected (highlighted in red) page(s)
- appended at the end of the Flipchart, if no page is currently selected

You may then select and move the page(s) to another location if you prefer.

To a different Flipchart, save your current Flipchart then open a new or existing Flipchart. Open the Page Organizer and select Paste. You may quit ACTIVprimary2 or even reboot your Mac after a page(s) were cut or copied in Page Organizer and paste them to your flipchart next time revisiting Page Organizer.

Select all

Selects all pages in the Flipchart.

Undo

Allows you to reverse the last action. Each click the Undo Tool reverses one more action.

Close

Click the close button to close the Page Organizer. You will be returned to the page number you were on before you opened the Page Organizer. Your Flipchart will be updated with the changes you made in the Page Organizer. The changes you make are not committed to the Flipchart until you save the Flipchart.

If you cut or delete all pages in your Flipchart, ACTIVprimary will automatically add a blank page to the Flipchart because it will not allow you to have a Flipchart that contains no pages.

Drag Objects Between Pages

In Design Mode only, you can copy or move object(s) from the currently displayed page to another page in the Flipchart.

1. Click the **Page Selector** button to show the Page Selector Tray.
2. Click the thumbnail of the page which contains the object you want to add to another page.
3. Drag an object from the page so that it is over a thumbnail of another page in the Tray. Notice the **cursor** will change.
4. Choose one of the following options from the contextual menu:

Copy here	Pastes a copy of the object onto the page whose thumbnail you dragged the object to. The object will also still reside on the original page.
Move here	Removes the object from the original page and pastes it onto the page whose thumbnail you dragged the object to.

When you drop object(s) onto a page the following actions occur:

- ACTIVprimary automatically displays the page you dragged and dropped the object(s) to
- The object(s) is automatically selected, ready to manoeuvre to a new position on that page if required.
- The page thumbnail images will also update to reflect the additional object on the page.

You can drag and drop objects onto other pages and it will retain any properties that have been applied to it.

Using the Control-click

In Present Mode:

1. You can Control-click the outer edge of the Toolbox or Flipchart page to switch the Toolbox to the other side.
2. You can Control-click the Calculator to toggle between a child's Calculator or a standard Calculator.
3. You can Control-click the on-screen keyboard to toggle between a child's keyboard or a full function keyboard. You can also choose between having small or large keyboards.

In Design Mode:

1. Switch Toolbox as in Present Mode.
2. You can Control-click the page background to open a contextual menu offering you the following actions:
    - Add background to library
    - Add grid to library
    - Unlock background objects
    - Insert new page
    - Insert link object
    - Paste Object
    - Paste Text from Clipboard
    - Paste Image from Clipboard
    - ACTIVote Question Settings
    - ACTIVote Results
    - Show Action Objects
3. You can Control-click a single object or a selection of objects to open a contextual menu offering the following actions:
    - Copy
    - Lock
    - Unlock
    - To front
    - To back
    - Bottom layer
    - Middle layer
    - Top layer
    - Deconstruct word
    - Lock on background

    4. You can Control-click an object in any library to display a popup dialog offering the action to delete the object.

5. You can Control-click the Calculator to toggle between a child's Calculator or a standard Calculator.
6. You can Control-click the on-screen keyboard to toggle between a child's keyboard or a full function keyboard. You can also choose between having small or large keyboards.
7. You can Control-click when editing text on a Flipchart page, or in Page Notes, to open a contextual menu offering the following actions Undo - Cut - Copy - Paste - Delete - Select All.
8. You can Control-click a Flipchart page, or in page notes, to **Paste Text from Clipboard**. You can use this to copy text from a Flipchart page, page notes, or even a word processing application and paste it onto your Flipchart page or in your page notes.
9. You can Control-click the Protractor and Ruler to show the degrees of rotation, or fill segments drawn with the Protractor.

Create a Link Object

A Link Object is a Flipchart object that links to a file or website directly from an icon or text on your page.

To open the Create Link Object window first ensure that you are in **Design Mode** and:

Control-click the Flipchart page and choose **Insert Link Object...** from the contextual menu.

Enter a path/filename or URL to link to	Click the **More** button and browse for an application name or file name. The path to an application or file name will be displayed in the textbox.
Video Placeholder	If you have created a link to an animation or video file, you will be able to insert the link as a Video Placeholder object by selecting this option. See the section about the **Video Placeholder** for more information.

Click **OK** when you are happy with your definition, or **Cancel** to close the window and remove your link object definition.

Or,

Double-click an object (except annotations), in the **Edit** palette click the **Properties** button that will bring **Object Edit Toolbox**. In the list select the Actions item, then from the appeared popdown menu select **Open Embedded Document or File** action. Clicking the **Select...** button will open the **Create Link Object** window.

When you hover the cursor over the link object, the **cursor** will change to indicate that it is a link object. Click the link and the application, file or website will open in a new window in the associated application.

Moving and Rotating a Link Object

To move the link object, first ensure that you are in **Design Mode** and that the Marquee Select Tool is active. Drag the Link Object to another position on the page.

To rotate the Link Object, use the **Rotator** pickup box to rotate it.

Editing a Link Object

You cannot edit a Link object to change the file it points to. Instead, you must delete the Link object and create a new one that links to the correct file.

Deleting a Link Object

To delete a Link Object you must be in Design Mode. Use the Marquee Select Tool to double-click the link object and click the **Delete** button on the **Object Edit Toolbox**. Or drag the link object over to the Flipchart Bin, located in the bottom left corner of your Flipchart.

Video Placeholder

To create a Video Placeholder object, insert a video file as a Link Object and select the Video Placeholder option. Click OK to open the Placeholder Definer window.

About Video Placeholder Objects

Video Placeholder objects reside as image objects on your page and display an image from a video file, which you specify in the **Link Object Definer**. The position and size of the video image indicates the area in which the video playback is displayed.

Using the Placeholder Definer

When you have finished defining your link object, click **OK** to view the Placeholder Definer window.

Use the Play and Pause buttons, or use the seek bar, to find a frame you want to use as the video image. Adjust the size of the window to alter the size of the video playback area. Click **OK** when you have finished and the frame you chose will be added to the page. Or, click **Cancel** to specify a different video file in the **Link Object Definer**.

Playing the Video

When you hover the cursor over the video frame image, the cursor will change to indicate that it is a link object. Click the video frame image to start the video and view the playback controls.

Playback Controls

Play

Starts the video playback.

Pause

Suspends the current playback and holds the position of the progress indicator on the timebar. Click Play to continue playback from the position where the playback was paused.

Stop

Discontinues the current playback and moves the progress indicator to the beginning of the timebar. Click Play to restart the playback.

Seek

The progress indicator moves along the timebar to indicate the current position in the video file.

You can click the progress indicator and drag it to a different position on the timebar to quickly move forwards or backwards to a specific point in the playback.

If you move the indicator whilst Play is active, the video file will play from the new position.

If you move the indicator whilst the Pause or Stop is active, the video file will remain paused or stopped until Play is selected, where it will playback from the new position.

Moving a Video Placeholder Object

To move the Video Placeholder object, first ensure that you are in **Design Mode** and that the Selection Tool is active. Drag the Video Placeholder object to another position on the page.

When the video is playing in Present Mode, you can drag the playback area to another position.

Editing a Video Placeholder Object

You cannot edit a Video Placeholder object to change the video file it's linked to. Instead, you must delete the Video Placeholder object and create a new one that links to the correct video file, using the **Link Object Definer**.

Deleting a Video Placeholder Object

To delete a Video Placeholder Object you must be in Design Mode. Use the Selection Tool to double-click the Video Placeholder Object and click the **Delete** button in the **Object Properties Palette**. Or drag the Video Placeholder Object over to the Flipchart Bin, located in the bottom left corner of your Flipchart.

When annotating over video in Transparent Window Mode, you may notice your annotations have a fer effect. This is a machine specific issue and is related to the quality of your graphics hardware.

It may be possible to prevent annotation fering by reducing the hardware acceleration of your graphics hardware. To do this, right click your Desktop and choose Properties. In the Advanced section, look for the Hardware Acceleration setting, which may be in the Performance or Troubleshooting sections. Adjust the Hardware Acceleration slider down from 'Full'. You will need to alter this slider setting to the point where the fering is prevented.

Object Properties Palette

When you double-click an annotation, image, line or shape object, a Toolbox will appear that allows you to perform the following functions:

Increases the size of the selected object.

Decreases the size of the selected object.

Allows you to delete the selected object.

Duplicates the selected object.

If you double-click a text object you will notice that an extended Toolbox appears:

The additional button is the Text Edit button, which allows you to edit the selected text object.

When you are working in Design Mode, the following button will appear:

All objects have properties associated with them that define how they display or interact with other objects. You may not be aware of these properties because initially each object will be set with default values. Use the Properties button to amend the properties and actions for a single or group of objects. See the section about **Object Properties** for more information.

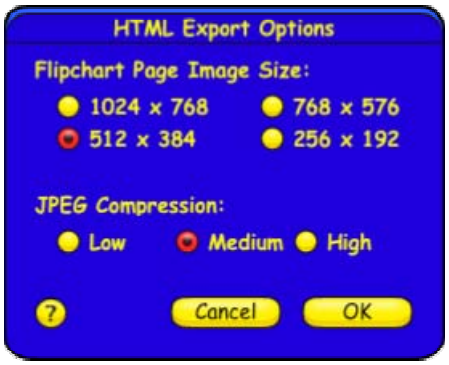
Export to HTML

Load or create the flipchart that you wish to export as a HTML pages.

To access the Export to HTML option:

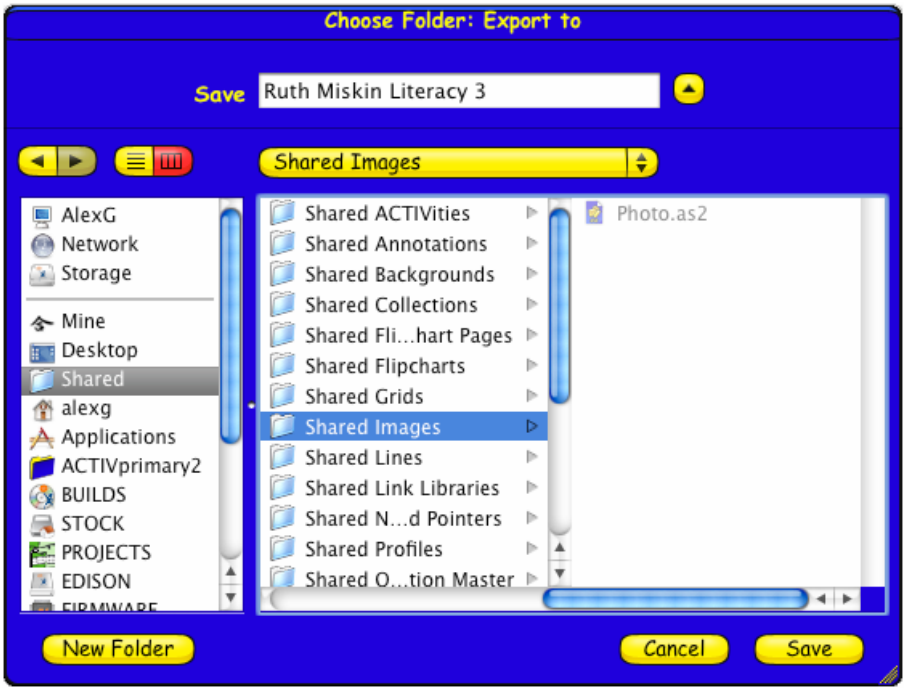
1. Click on **Teachers Toolbox Menu** button
2. Click on **Menu** button on appeared menu tray
3. Select **Export to HTML...** menu item

ACTIVprimary2 will display the HTML Export Options dialog:



4. You can Set Flipchart Page Image Size (default is 512 x 384)
5. You can choose the amount of JPEG Compression to apply (Default is medium)
6. Click **OK** when ready

You will be prompted to choose the output folder where your HTML pages will be saved.



Use the Dialog box to locate or create the output folder then click on the Choose Button.

The HTML pages will be created and you will be asked if you wish to view them:

Click on the OK button and your saved html pages will be presented in your default web browser.

Sample HTML page output:

promethean
